EMBRAER AND BREEZE AIRWAYS SIGNED POOL PROGRAM AGREEMENT

News / Airlines, Manufacturer

Embraer has signed a long-term Pool Program Agreement with the U.S. carrier Breeze Airways to support a wide range of repairable components for the airline's E190s and E195s fleet. The agreement includes full repair coverage for components and parts, as well as access to a large stock of components at Embraer's distribution center, which will support the start of the airline's operation.

"We're very happy to extend our partnership with Embraer to include the Pool Program which confirms not only that we get immediate access to an inventory of parts more efficiently, it greatly enhances our aircraft maintenance and schedule reliability, and also reduces our upfront investment and allows for a more efficient management of our spares inventory," said Amir Nasruddin, Breeze's Vice President Technical Operations & Fleet Programs.

"It is an honor for Embraer to support Breeze since the beginning of its operations," said Danielle Vardaro, Head of Worldwide Customer Support and Aftermarket Sales, Embraer

Services & Support. Every new Pool contract highlights the importance of Embraer's direct support and it is a fantastic opportunity to strengthen the partnerships with our customers. In this particular case—supporting a start-up airline—our responsibility is even greater in order to guarantee smooth aircraft operations and entry into service."

The program will provide the most efficient and reliable solutions to Breeze's E-Jets fleet. The airline will benefit from the availability of spare parts, enjoy significant savings on repair and service costs, and maintain a profitable operation. Currently, the Pool Program supports more than 50 airlines worldwide.

Embraer's Flight Hour Pool Program is designed to allow airlines to minimize their upfront investment on high-value repairable inventories and resources and to take advantage of Embraer's technical expertise and its vast component repair service provider network. The results are significant savings on repair and inventory carrying costs, reduction in required warehousing space, and the virtual elimination of the need for resources required for repair management, while ultimately providing guaranteed performance levels.
