

ACS KEEPS WORLD RECORD ATTEMPT ON TRACK

News / Airlines

Air Charter Service (ACS) has been called upon to help complete 'Cape to Cape 2.0', a world record attempt driving from the southernmost point in South Africa to the northernmost point in Norway.

The private aircraft charter firm says it was asked to assist in the adventure as with Syria out of the question to travel through, the team, driving a Volkswagen Touareg from Cape Agulhas to Nordkapp, was given special World Record dispensation to fly the car and themselves from Jordan to Turkey.

The closest airports to the borders were chosen, Amman and Adana, in order to spend as little time off the road as possible.

ACS's commercial director, Justin Lancaster, explains: "Teamleader of the trek Rainer Zietlow already held two long distance driving **records** – Tierra del Fuego to Alaska and Melbourne to Saint Petersburg, but needed our help for this one.

“We chartered the rear-loading Antonov 74 in order for them to drive to 4x4 straight up the ramp in Amman and drive straight off the other end in Adana.

“They were then back on their way minutes later. And we’re pleased to say that they completed the whole journey in 9 days, 4 hours, 9 minutes and 27 seconds – setting a new World Record.”
