PRAGUE AIRPORT DEFENDS ACI AIRPORT HEALTH ACCREDITATION

News / Airports / Routes

Prague Airport remains a safe place for travel as confirmed by the ACI Airport Health Accreditation (AHA) Certificate, re-assigned to Prague Airport for a high level of protective measures implemented, which ensures increased safety of passengers flying through Prague. The Certificate appreciates the fact that the set standards meet the requirements of international organisations in the aviation industry.

“The airport has repeatedly demonstrated an admirable continuation of its efforts to provide a safe airport experience for all travellers which is in line with the recommended healthPrague Airport Defends ACI Airport Health Accreditation measures established in the ACI Aviation Business Restart and Recovery guidelines and ICAO Council Aviation Recovery Task Force Recommendations,” Luis Felipe de Oliveira, ACI World Director General, stated in the reaccreditation letter.

Prague Airport has maintained its accreditation for the next 12 months. The measures implemented have been in place since the spring of 2019, applied by Prague Airport as one of the first entities in the Czech Republic.

"To obtain the Certificate, it was necessary, for example, to present information on all set measures and processes, including detailed records of cleaning and disinfection schedule, draft an overview of changes in passenger check-in procedures as well as share specific steps aimed at protecting the health of airport employees. In this regard, we have introduced our own sophisticated system for tracing contacts in the workplace. Therefore, I am immensely happy that the set protection measures work, eliminate health risks for travel and thus increase the safety of flying from Prague," Ji?í Pos, Chairman of the Prague Airport Board of Directors, said.

Departure and arrival heck-in is performed under strict hygienic conditions. All passengers and visitors are obliged to wear FFP2 class respirators while inside the airport, to maintain a safe distance, and to pay thorough attention to hand hygiene and disinfection. For this purpose, over 300 disinfection tanks are located throughout the airport. Since June last year, a commercial test point has been run in cooperation with an external laboratory, where passengers can get COVID-19 tested before departure or after arrival. The airport is also subject to increased disinfection and cleaning of all busy areas, including passenger gates.

"We inform passengers about the set measures in a number of ways, including airport announcements, repeated at regular intervals, alongside information signs located throughout the airport, and floor stickers in places where queues may form," Daniel Otta, Customer Experience Manager, added.

ACI Airport Health Accreditation (AHA) is an official certification programme that is open to all member airports of this organisation worldwide. Under the programme, the ACI evaluates airports according to individual criteria and thus assesses their set protective measures and other tools they use in the fight against the COVID-19 pandemic. Obtaining the accreditation then confirms

that the airport is well prepared and that passengers can fly safely and with ease from the certified airports. At the same time, thanks to this accreditation, hygiene standards are being implemented throughout the aviation industry with the goal to increase the safety of travel, boost the confidence of passengers in accredited airports, and fuel the demand for air travel.

Airports Council International (ACI) is a global industry association that brings together approximately 1960 airports in a total of 176 countries. It was founded in 1991 and aims to promote cooperation among members and other partners in the field of air transport.

Additional information on security measures at Václav Havel Airport Prague and other important information for passengers are available on the Prague Airport's website here: www.prg.aero/ochranna-opatreni.
