A NEW UNMANNED HELICOPTER WITH AN ARCTIC MODIFICATION PRESENTED

News / Events / Festivals, Manufacturer

The Russian Helicopters company, part of the Rostec state corporation, presented a new unmanned aerial vehicle (UAV) at the International Industrial Trade Fair INNOPROM-2017, the company's press service said Monday.

It is also noted that the complex is planned to be produced in two versions: Arctic Supervision with side-viewing radar for ice reconnaissance and exploitation under the Arctic conditions, as well as Sky Supervision with extended flight range for remote sensing and monitoring."In the booth of the holding, the model of the multipurpose complex on the basis of the helicopter-type unmanned aerial vehicle VRT-300 developed by 'RH-Technologies' is presented. Currently the complex is undergoing ground tests, its flight testing and certification are scheduled for 2018-2019. Takeoff weight of the UAV is up to 300 kilograms [660 pounds]."

Russian Helicopters within the framework of a unified display of Rostec also presented Mi-26T2, Ansat and multirole Mi-171A2 helicopter models, the last — in offshore version, whose project is at
