

AIRBALTIC PILOT ACADEMY CELEBRATES 33 GRADUATES

News / Airlines, Maintenance / Trainings

33 students graduated from the Pilot Academy of the Latvian national airline airBaltic, receiving a commercial pilot license upon completion of the full-time airline transport pilot program. This marks the largest graduation ceremony in the academy's history. The graduates represent countries such as Austria, Estonia, Finland, France, Germany, Italy, Latvia, Lithuania, the Netherlands, Romania, and Sweden. There are 141 active students at the airBaltic Pilot Academy at the moment. Most of them are from the Baltic countries, however, there are students also from other EU countries such as Denmark, Germany, France, Finland, Spain and Italy among others. Overall, more than 10% of airBaltic Pilot Academy students are female.

Vilmantas Vaclovas Mažonas, CEO of airBaltic Training commented: “We are proud to congratulate the latest graduates of the Pilot Academy. Each of them represents not only personal dedication and achievement but also the next generation of aviation professionals shaping the future of airBaltic and the broader industry. Many of them are now preparing to take the next steps in their training, paving way to join the airBaltic team. The success of any airline relies on having skilled and highly trained professionals, and we are committed to fostering such talent.”

Over the years, 164 graduates of the airBaltic Pilot Academy have become employees of the airline – most of them now flying as First Officers, with several also taking on roles as training instructors. Notably, the academy has reached a new milestone as already four of its graduates have successfully completed their Captain upgrade, becoming the first Pilot Academy alumnus to serve as a Captain at airBaltic. This achievement demonstrates the strength of the program and the clear career path from cadet to Captain.

This is a unique cadet sponsorship program where, after passing the airBaltic’s pilot assessment and becoming an employee of the company, the airline provides financing (loan) for the rest of the studies.

Additionally, for more than a year now, airBaltic has expanded its training capabilities with its second Airbus A220 full flight simulator. This state-of-the-art addition significantly improves the airline's capacity to train and maintain the qualifications of its growing team of pilots, supporting both the expansion of its fleet and the ongoing development of the Pilot Academy. It also provides young pilots with the opportunity to learn and practice using the latest, industry-leading technology – right from the start of their journey.
