BAA TRAINING LAUNCHED A NEW PILOT TRAINING PROGRAM IN COOPERATION WITH ENAC

News / Maintenance / Trainings

BAA Training launches a new Ab Initio training program in cooperation with Ecole Nationale de l'Aviation Civile (ENAC). The new pilot training program has been tailored to individual, self-sponsored clients so that anyone interested, with little or no aviation experience, can enroll. BAA Training will deliver ATPL theoretical phase, VFR and advanced phases in accordance with the customer's demands. Bridge VFR and IFR will be subcontracted to ENAC and conducted in one of its training centers in France.

Marijus Ravoitis, CEO at BAA Training: "We have been partners with ENAC for over two years now. As both organizations share a common mission in the industry, we are glad to pool our expertise to offer world-class training to everyone willing to become commercial pilots. The new program for individual students that we have now launched in cooperation with ENAC is the next step after we introduced the same kind of program to airlines."

"We predict the program based on ENAC's and BAA Training best training practices will receive the most attention from customers who are interested in spending part of their training in the French environment. ENAC is our partner in this region and is recognized for its high standards in aviation training," Marijus adds.

Thierry de Basquiat, Director of ENAC flight school: "We are very proud to have been selected by BAA Training to perform Bridge VFR and IFR part of their new ATPL program. We will bring to BAA Training all our expertise and quality standards to their students and

join our forces to make this new BAA Training program truly a success.”

The French Civil Aviation University (ENAC), the school of the French Civil Aviation Authority (DGAC) under the supervision of the French Ministry of Ecological Transition, combines education and research in aeronautical engineering, air navigation and aircraft piloting. Every year ENAC enrolls over 2000 students in more than 30 programmes of study, and 3500 trainees enrolled in continuing education programmes. ENAC’s 25,000 graduates can be found in some 100 different countries on all 5 continents – proof of the school’s international influence. Its scale and its human and pedagogical resources make ENAC the leading European school of aeronautics today.
