

AUSTRIAN AIRLINES LOOKING TO HIRE 600 NEW EMPLOYEES

News / Airlines

- Growth planned in the long-haul segment following expansion of medium-haul fleet
- 2018: flight service to Japan and South Africa planned

Austrian Airlines can look back at a successful year in 2017. Close to 12.9 million passengers flew with Austria's red-white-red national carrier last year, comprising a rise of 12.8 percent compared to 2016. The airline plans another small expansion step in the current year, namely the integration of another long-haul aircraft, a Boeing 777-200 jet, in its fleet. The additional capacity will enable Austrian Airlines to expand its intercontinental route network. Starting May 15, 2018, the airline will resume flight service to Tokyo in Japan, and also plans to begin operating flights to Cape Town in South Africa as of October 27, 2018.

“It is planned to hire 150 employees just to operate this one new aircraft”, explains Austrian Airlines CEO Kay Kratky. Austrian Airlines needs to expand its current staff by a total of 600 people this year due to the expansion of the medium-haul fleet in the past year as well as the planned transfer of pilots to the Lufthansa Group. “Austrian Airlines will continue to grow at the Vienna flight hub in spite of the current turbulences on our domestic market. We are currently looking for about 200 pilots, 300 flight attendants and 100 employees in the fields of aircraft maintenance and ground handling”, CEO Kratky states.

The Boeing 777 will offer room for 306 seats, 24 of which are in the new Premium Economy Class. The new seats feature a greater reclining angle for more generous seat spacing and a

broader seat service. This is complemented by a larger monitor for the on-demand entertainment compared to Economy Class as well as upgraded catering.

460 new employees already added at the Vienna Airport flight hub in 2017

Austrian Airlines employed 6,914 people as at December 31, 2017, a rise of 7.2 percent or 464 employees compared to the previous year. The fleet of consisted of 83 aircraft at the end of 2017, including 72 short-haul and medium-haul jets (Bombardier Dash 8-400, Embraer 195, Airbus 320F) and eleven long-haul aircraft (Boeing 767 and 777). The integration of the twelfth long-haul aircraft in the Austrian Airlines fleet is scheduled for May 2018.
