

ELECTRONIC FLIGHT PLANS FOR PILOTS - INTRODUCED BY AIRBALTIC

News / Airlines

airBaltic has recently introduced a new sustainability project, replacing pilot briefing packages with electronic operational flight plans that airBaltic pilots will be able to access on their iPads.

Martin Gauss, Chief Executive Officer of airBaltic: “We introduced iPads for our pilots already back in 2014, saving vast amounts of printed paper each year and providing additional operational efficiency. Now we are taking yet another significant step in the electronic flight bag project, by replacing one of the last documentation that pilots had to print before each flight with a digital solution.”

Pilot briefing packages contain operational flight plan, weather forecast, information about the relevant airports among other documentation. During the flight pilots had to fill these forms by hand and submit them for post-flight processing. Now the entire process has been implemented on iPads.

Already back in 2014 airBaltic introduced iPads to pilots allowing them to avoid carrying between 10-15 kg of flight details, manuals and reference material to each flight. Three years later iPads were introduced also for airBaltic cabin crew.

In October 2020, Latvian airline airBaltic published its annual sustainability report, providing information of airBaltic and its subsidiaries performance in this segment for 2019. Full airBaltic sustainability report is accessible on the company's website: https://www.airbaltic.com/about/investors/sustainability_report_2019_en.pdf
