

FIRST EMBRAER E190-E2 FOR AIR ASTANA ARRIVES IN KAZAKHSTAN

News / Airlines

The first new generation Embraer E190-E2 for Air Astana arrived at Nursultan Nazarbayev International airport in Astana yesterday, following ferry flights from the manufacturer's factory in São José dos Campos, Brazil. This is the first of five Embraer E190-E2 aircraft scheduled to be delivered to Air Astana following an order originally placed in August 2017. Air Astana currently operates a fleet of nine Embraer E190 aircraft on domestic and low-density regional services, with the first aircraft having entered service in 2011. The new generation Embraer E190-E2 aircraft will gradually replace older Embraer E190s in the fleet.

The new aircraft features a special Air Astana "Snow Leopard" livery, which is intended to draw global attention to the threat of extinction faced by this large wild cat, which is a native of the mountain ranges in southern Kazakhstan. Air Astana seeks to improve ecological protection for endangered species, like the Snow Leopard, as well as more widely preserving the environment.

The twin engine, single aisle Embraer E190-E2 belongs to the family of upgraded E-Jets, which offer lower operating costs, emissions and noise levels, with a range of more than 5,000 km.
