

QATAR AIRWAYS SIGNS WITH SHELL FOR SAF SUPPLY AT AMSTERDAM SCHIPHOL AIRPORT

News / Airlines, Airports / Routes

Qatar Airways signed with Shell to source 3,000 metric tonnes of neat SAF at Amsterdam Schiphol airport. It encompasses the existing jet fuel contract with Shell at Amsterdam which will now see Qatar Airways using at least a 5 % SAF blend over the contract period for the fiscal year 2023-2024. The Qatar Airways bilateral agreement with Shell is part of a wider effort initiated by the oneworld alliance, which has a set target of using SAF for 10% of combined fuel volumes by 2030.

Qatar Airways Group Chief Executive, His Excellency Mr. Akbar Al Baker, commented: “At Qatar Airways, we are strongly committed to supporting the industry’s effort to ramp-up the use of sustainable aviation fuel, as one of the key pillars to decarbonise the aviation industry. Last year, we signed our first offtake agreement in the US, and now we are placing a multi-million US dollar SAF deal in Amsterdam to illustrate our SAF commitment and reiterate our calls for a more robust SAF supply chain across our global network. We remain steadfast in our ambitious target of 10 per cent SAF use by 2030 and this announcement, establishes another landmark for Qatar Airways that underlines the positive outcome of the industry’s collaboration which is critical to accelerating the SAF supply and achieving our target. SAF is still 3 to 5 times more expensive than fossil-based

jet fuel. This is why it is essential for all stakeholders to play their part in facilitating research & development of SAF facilities, enhancing economies of scale, providing financing and placing supportive policies”.

Mr. Jan Toschka, President of Shell Aviation, said: “Qatar Airways and Shell have a history of collaboration, so it is fantastic to now work together on decarbonisation as we supply them with SAF for the first time. SAF is a key lever for decarbonising aviation, but scaling its supply and use requires concerted action from across the aviation sector. Today’s agreement is a great example of the collaborative actions that are required to help accelerate aviation’s progress towards net zero.”

Passengers and customers of Qatar Airways are able today to compensate for their flight emissions through the purchase of high-quality carbon credits, credited under International Civil Aviation Organization criteria, the UN's aviation body. Qatar Airways currently invests in carbon credit projects that generate renewable energy, which help in reducing carbon emissions. Qatar Airways is also working on introducing a solution which will allow passengers and customers to offset their emissions by contributing to the cost of SAF.
