

SOMON AIR RECEIVES ITS FIRST BOEING 737 MAX JET

News / Airlines, Manufacturer

Boeing and Somon Air announced the delivery of the airline's first 737 MAX, as the Tajik national carrier continues to modernize its fleet and grow its network. The 737-8 is the first of two airplanes leased from Dubai Aerospace Enterprise to be delivered and represents the first 737 MAX in Tajikistan. The 737-8 is central to Somon Air's fleet renewal strategy and will be used to fly short- and medium-haul routes across Central Asia, Europe, the Middle East and Asia. With longer range and stronger operating economics than previous-generation airplanes, the 737-8 gives Somon Air the flexibility to serve high-demand routes while positioning the airline for future growth, including planned service to London, Beijing and Guangzhou.

Abdulkosim Valiev, CEO of Somon Air commented: "Considering the central geographic location of Tajikistan and the improved range capability of Boeing 737-8, this fleet expansion gives Somon Air opportunity to open new routes with improved economics considering the new aircrafts' fuel efficiency. Somon Air greatly values its unique long-term relationship with the Boeing company and looks forward to continuous growth of its fleet by adding more efficient and modern Boeing aircraft."

Firoz Tarapore, CEO of DAE, stated: "DAE is delighted to a part of this momentous occasion, delivering both Somon Air's first Boeing 737-8, and the first Boeing 737-8 in Tajikistan. This aircraft is part of a two aircraft commitment, and we are excited to further our relationship with Somon Air. We wish the management team success in deploying these aircraft across their network. DAE Capital has over 190 Boeing 737 MAX Family aircraft in its fleet, and the family form a key pillar of our commitment to operating the newest, most fuel-efficient aircraft."

Paul Righi, Boeing vice president of Commercial Sales and Marketing for Eurasia, India and South Asia said: "We're honored by Somon Air's trust in Boeing, and the 737 family, as they evolved from a regional carrier into an emerging international presence over the past 20 years. The 737-8 is the right airplane for the airline's modernization, and we look forward to supporting Somon Air's continued growth for many years to come."

As the most versatile variant of the 737 MAX family, the 737-8 can carry up to 210 passengers depending on configuration, with a range of up to 3,500 nautical miles (6,480 km). The 737 MAX will support Somon Air's fleet modernization by reducing fuel use and carbon emissions by 20% compared to the airplanes they replace.
