

TAROM TOOK DELIVERY OF ITS FIRST BOEING 737 MAX

News / Airlines, Manufacturer

Boeing, TAROM and CDB Aviation have celebrated the delivery of the airline's first 737 MAX 8, marking the arrival of Romania's first Boeing 737 MAX and a key milestone in the national carrier's fleet modernization and long-term growth strategy.

Cristian Anghel, TAROM CEO commented: "The addition of the first Boeing 737 MAX aircraft to the TAROM fleet is a pivotal moment in the company's transformation process. Fleet renewal and efficient operational capacity are essential components of our restructuring plan, enabling us to achieve operational efficiency. By integrating this model into our fleet, TAROM offers its passengers a superior travel experience. This aircraft's advanced technology and low environmental footprint align perfectly with our vision for sustainable operations and our commitment to maintaining a young, state-of-the-art fleet that connects Romania to the world. The fact that the aircraft bears the name of Mircea Lucescu also adds a symbolic dimension. We are talking about performance, discipline, and trust – values that also define this new chapter for TAROM."

Gavan Daly, CDB Aviation's Head of Commercial, EMEA stated: "We are delighted to support

TAROM as it takes delivery of its first 737-8 and continues its fleet modernization strategy. This delivery underscores our long-standing partnership with Boeing and our commitment to providing TAROM with efficient, state-of-the-art aircraft that enhance operational performance and offer a better experience for passengers.”

Mario Antonio Ebcim, Boeing sales director for Eurasia and India said: “We are honored to see TAROM welcome the 737 MAX into service. This milestone reflects the trust the airline has in the 737 family and in our partnership as it charts its next chapter. We are continuing to deliver on our promise of safety, reliability and comfort to the more than 1 million passengers who fly on our airplanes every day.”

TAROM’s 737-8 is the first of two airplanes leased from CDB Aviation to renew the airline’s single-aisle fleet, which currently includes four 737 Next-Generation jets. The 737 MAX provides operational consistency and increased efficiency, reducing fuel use and carbon emissions by 20% compared to the airplanes they replace. TAROM will fly its growing 737 MAX fleet on routes connecting Bucharest with major European capitals, providing an enhanced passenger experience.

Boeing’s 2026 Commercial Market Outlook projects that Eurasian airlines will need to expand their in-service fleet from about 6,800 airplanes today to nearly 11,000 by 2045 to meet travel demand. Single-aisle airplanes like the 737 MAX are expected to account for nearly 81% of newly delivered airplanes to the region to support fleet growth and renewal.
