AIRPORT KOLTSOVO (EKATERINBURG) – A NEW POINT ON THE MAP OF AEROFUELS REFUELING COMPLEXES IN RUSSIA

News / Airports / Routes

In January this year the Group of Companies Aerofuels subsidiary started refueling the Russian and international airlines flights in the airport of Koltsovo (Ekaterinburg).

To make into-plane refueling Aerofuels uses its own jet fuel and modern certified refuellers. At the same time the customers are guaranteed advantageous price conditions and a fast high-quality service in compliance with all Russian and international standards and requirements.

Refueling launching in the airport of Koltsovo is an important event not only for the group of companies Aerofuels, but also for the whole Ural region and its capital – the city of Ekaterinburg: upon the alternative refuelling service starting the new conditions for jet fuel reduction in the airport and attraction of additional volumes of refueling in Koltsovo have appeared. The healthy competition in the jet fuel market surely satisfies interests of business and the region residents, and will have a positive effect on the development of one of the largest transport hubs of Russia.
