

MARKING 10 YEARS OF TRANSFORMATIVE COLLABORATION AND INNOVATION WITH AIRPORTLABS

News / Airports / Routes

Dubai Airports received the Operational Excellence Award from AirportLabs at Passenger Terminal Expo 2025, recognising a decade of innovation that has transformed operations at the world's busiest international airport, Dubai International (DXB) and Dubai World Central – Al Maktoum International (DWC), Dubai's vision for the future of aviation.

The award honours Dubai Airports' sustained leadership in operational performance, digital innovation, and the deployment of cutting-edge technologies across DXB and DWC, setting new global standards for airport excellence. By adopting and scaling cloud-based, real-time systems tailored and co-created to its unique operational demands, Dubai Airports has redefined what efficiency, resilience, and passenger-centric service look like in modern aviation. Presented during AirportLabs' 10th anniversary, the award also reflects a long-standing commitment to continuous improvement and future-focused airport operations.

A relentless pursuit of operational excellence

Dubai Airports' continued recognition stems from its unwavering focus on operational performance, fuelled by the strategic adoption of best practices and next-generation technologies. Through a bold embrace of innovation and real-time responsiveness, Dubai Airports has set global benchmarks in operational excellence—delivering world-class service in one of the

most complex and high-traffic airport environments on the planet.

Its future-ready infrastructure and intelligent systems enable seamless coordination and agility, even at record-breaking passenger volumes. For passengers, these innovations translate into faster, smoother, and more secure travel experiences—even during periods of peak demand. By consistently investing in digital platforms and scalable operations, Dubai Airports has redefined what it means to be resilient, adaptive, and customer-first in modern aviation.

This award is not just a nod to technological advancement, but a reflection of Dubai Airports' long-standing commitment to continuous improvement, sustainable growth, and its role as a powerhouse of global connectivity and economic progress.

A decade of collaboration: from vision to reality

That journey of excellence has been supported by a decade-long collaboration built on trust, shared vision, and a drive to tackle complex operational challenges through innovation. Through its early partnership with AirportLabs, Dubai Airports played a key role in shaping some of the aviation industry's most impactful digital solutions — many of which were designed, tested, and successfully implemented within the dynamic environments of DXB and DWC.

Key early milestones included the adoption of the Airport Community App and the rollout of the VisionAir Flight Information Display System in 2016. These solutions transformed how real-time information was shared across the airport, streamlining collaboration among airport stakeholders and enhancing the passenger experience. By transitioning mission-critical systems to the cloud — a bold move for the industry at the time — Dubai Airports established new standards for situational awareness, communication, and responsiveness at scale.

Building on this momentum, AirportLabs and Dubai Airports co-created a suite of custom solutions tailored to the complexities of managing high-volume aviation hubs:

- **SkyCore AODB** – for centralised operational data management
- **Real-Time DXB** – for live situational awareness
- **Pocket Flights** – for mobile access to real-time flight information
- **Allegra RMS** – for advanced resource planning and allocation

These innovations continue to support Dubai Airports' ability to deliver exceptional service levels, even amid record-breaking passenger traffic.
