AIRGO RECEIVES APPROVAL TO INCREASE TBO FROM 3,600 HOURS TO 4,100 HOURS ON ITS AVANTI II AND EVO AIRCRAFT PT6A-66B ENGINES

News / Business aviation

AirGO Private Airline, a boutique charter operator and provider of the Piaggio Aero Avanti aircraft, announced at ACE18 that it received the approval by Pratt & Whitney Canada Corp. for an increase in Time-Between-Overhaul (TBO) interval for its PT6A-66B and other similar engines in its fleet of Avanti II and Avanti EVO aircrafts operated under AirGO Private Airline GmbH. The interval increases from 3,600 hours to 4,100 hours, or 12 years (whichever occurs first). This TBO recommendation applies to enginesoperated and maintained by AirGO for more than 50% of the current recommended TBO interval until the fleet's overhaul.

The approval is valid for all of AirGO's five aircraft it currently manages, as well as for new Avanti EVO orders placed by the company.

"This TBO increases the engine lifetime by 14% and reduces maintenance cost for our Avanti II and EVO owners significantly," said AirGO CEO Daniela Flierl. "I am very proud of this achievement for our Avanti fleet, which reflects our continued focus on product improvement and business commitment to ensure our customers are operating the most cost-efficient and optimal aircraft in this segment."

AirGO was exhibiting at the Air Charter Expo (ACE18), in London Biggin Hill, 11 September at the Gold Static Display where attendees, brokers, passengers and potential buyers could view its Piaggio Aero Avanti aircraft.

AirGO specializes in the sales, management and charter of the Piaggio Aero Avanti and Avanti EVO aircrafts, a unique set of aircraft offering the same cabin space as a mid-size jet and speed as a light jet with the fuel efficiency of a turboprop. For nearly 20 years, AirGO's unique operational experience and Avanti product knowledge has offered customers a truly tailor-made experience from purchase through operations that is unmatched in the industry.
