BOMBARDIER DELIVERS FIRST GLOBAL 8000 IN ASIA, MARKING A KEY MILESTONE FOR ULTRA-LONG-RANGE AVIATION IN THE REGION

News / Business aviation, Manufacturer

Bombardier delivered the first Bombardier Global 8000 aircraft in Asia to an undisclosed customer based in Shanghai, marking an important step in the expansion of ultra-long-range business aviation across the region. With its unique combination of speed, range and operational flexibility, the aircraft is exceptionally well suited to meet Asia's mission profile, where customers value nonstop access between major financial centers, time savings on long-haul travel and the ability to connect seamlessly to destinations around the world. The Global 8000 enables nonstop city pairs such as Shanghai to New York, Shanghai to Dublin and Shanghai to Sydney, helping customers travel farther and faster while staying productive in flight.

Emmanuel Bornand, Vice President, Sales, International commented: "This first Global 8000 delivery in Asia reflects the region's continued appetite for aircraft that combine range, speed and an exceptional level of comfort for its passengers. Asia is a strategic market for Bombardier, and the Global 8000 is particularly well aligned with the way customers in the region travel: across long

distances, on tight schedules and with a strong focus on comfort, efficiency and nonstop global connectivity.”

For customers in Asia, the Bombardier flagship Global 8000 brings together the attributes that matter most on long missions: exceptional speed, a global reach, the healthiest cabin environment and the flexibility to land into more airports. In a market where long-range capability remains a priority, the aircraft offers a top speed of Mach 0.95, a range of 8,000 nautical miles and the industry’s lowest cabin altitude for an aircraft in production at 2,691 ft. (820 metres). These advantages help passengers arrive more refreshed and give operators greater freedom to optimize missions across Asia and beyond.

This milestone delivery reinforces Bombardier’s momentum in Asia and underscores the appeal of the Global 8000 for customers seeking a rare combination of global reach, operational flexibility and uncompromising comfort. This momentum is further reflected in Bombardier’s recent announcement to expand its Singapore Service Centre at JTC’s Seletar Aerospace Park through the addition of a newly built nearby facility of approximately 250,000 square feet, further strengthening its services footprint and customer support capabilities across Asia-Pacific.

In addition to?its four zone cabin, performance attributes and ultra-long-range capabilities, the? aircraft?remains?remarkably agile, with takeoff and landing performance comparable to that of a light jet. Its?advanced?wing design featuring?unique?leading-edge slats enable customers to master 30% more airports than its closest rival.?
