

BOMBARDIER GLOBAL 7500 BUSINESS JET JUST ACHIEVED ITS 150TH SPEED RECORD

News / Business aviation, Manufacturer

Bombardier Global 7500 business jet just notched a new performance milestone with its 150th speed record, the most ever set by a single business aircraft type. The latest achievements attained by this blazing fast business aircraft include key city pair speed records, such as Tokyo to Los Angeles, Toronto to Paris, New York to London and Hong Kong to Montreal.

What's more, the aircraft averaged a speed in excess of 1,000 km/hr on 20 of its record-setting missions, bringing passengers to their destinations in record time. Earlier achievements on the Global 7500 include the longest flight ever recorded in business aviation – an 8,225 nautical mile (15,232.7 km) flight from Sydney to Detroit – as well as the industry's longest range non-stop mission from London City Airport to Los Angeles.

Jean-Christophe Gallagher, Executive Vice President, Aircraft Sales and Bombardier Defense commented: "The Global 7500 continues to redefine what is possible in business aviation. Our customers count on us to deliver a business tool with the highest standards in luxury, speed and reliability, and the Global 7500 overachieves on all fronts. Many of these records have been set with passengers on board in varying conditions and airports, making these achievements even more meaningful and reaching this pinnacle more remarkable."

Boasting a top speed of Mach 0.925 and a baseline range of 7,700 nautical miles (14,260 km), the

Global 7500 sets a new benchmark for performance in the ultra-long-range category. With its unique Smooth Flex Wing, the aircraft generates exceptional lift on takeoff and approach, maximizing aerodynamic efficiency and enhancing safety, while delivering the industry's smoothest ride. It also reduces fuel burn, lowers emissions and produces excellent short-field and high-speed performance – producing the perfect platform for our discerning customers.

The unique attributes of the Global 7500 aircraft will soon be enhanced with the introduction of the Global 8000 aircraft. Bombardier's flagship for a new era is anticipated to have an industry-leading range of 8,000 nautical miles (14,816 km) and a top speed of Mach 0.94, making it the ultimate all-in-one business aircraft. It will also feature an ultra-low cabin altitude that will redefine business aviation standards.

Bombardier's Global 8000 also possesses impressive runway performance comparable to a light jet. Its unique design and cutting-edge engineering provide customers with the ability to access smaller airports other aircraft in its category can't reliably operate in.
