

CIRRUS AIRCRAFT CELEBRATES 500 VISION JET DELIVERIES WITH LIMITED EDITION SERIES

News / Business aviation, Manufacturer

Cirrus Aircraft revealed Special Edition Vision Jet to commemorate 500 deliveries of the world's first single-engine personal jet. The Vision Jet has been the best-selling jet for five years and has become a proven asset for business and personal travel, widely utilized by Part 91 and 135 operators. With inflight Wi-Fi and the Cirrus IQ mobile app, the G2+ Vision Jet is now more connected than ever enabling streamlined business travel.

Zein Nielsen, Chief Executive Officer of Cirrus Aircraft, commented: "With the delivery of the 500th Vision Jet, Cirrus Aircraft celebrates the marketplace success of a category-defining aircraft. The Vision Jet is the only jet that features advanced innovations like the Cirrus Airframe Parachute System, Safe Return Autoland, Wi-Fi, Cirrus IQ and Auto Radar along with a suite of other safety, comfort and convenience features. Cirrus Aircraft makes aviation more accessible with the G2+ Vision Jet's best-in-class performance and low operating cost."

Efficient and sustainable platform for business aviation operators

The Vision Jet has the capabilities and comforts that can achieve many of the missions that larger corporate jets do at significantly smaller operating costs making it the ideal supplement to every corporate fleet. The Vision Jet adds flexibility for short regional and longer cross-country missions with lower fuel burn due to its innovative single-engine and V-tail design. All Vision Jets can be powered by SAF fuel as well. According to Conklin & De Decker, the Vision Jet has the [lowest CO2 emissions](#) rate compared to all general and business aviation jets.

Concierge owner and operator support

Cirrus Aircraft offers an entire ecosystem of owner support services for Vision Jet owners throughout their lifetime of aircraft ownership. For example, [JetStream](#) simplifies ownership by setting a predictable cost of ownership and is inclusive of a range of services from recurrent training to subscriptions (Jeppesen Charts, Sirius XM Weather, Garmin Connex) to maintenance coverage. Cirrus Aircraft offers progressive inspections for aircraft operating over 400 hours per year which help reduce the operating cost per hour and minimize downtime compared to routine FAA 100-hour requirements.

500th limited edition design

Five Limited Edition Vision Jet liveries were created by Cirrus Aircraft Xi Design team to celebrate this industry milestone which were all inspired by the jet's unique design and bold colorways. Owners chose from five exterior color options to complement the Obsidian Black and Vision Blue paint. Energetic graphic lines accentuate the movement and motion of the design on the exterior. All commemorative aircraft are embellished with 500th Limited Edition branding throughout. The interior features blues, grays and carbon fiber. The crew seats are heathered gray Alcantara capped by a leather shoulder and headrest featuring an embroidered 500th edition emblem. The center of the seat is a cascade of diamond-patterned leather with stylistic perforations.

Legacy of innovation

After the initial release of the Vision Jet in 2016, the first major evolution of the SF50 was the introduction of the Generation 2 (G2) Vision Jet in 2019. The G2 Vision Jet included RVSM Certification enabling the aircraft to attain a maximum altitude of 31,000 feet (FL310). This increase in altitude brought with it more speed and better efficiency. The G2 also acquired an Auto

Throttle and engineering improvements providing 200 lbs. of additional payload.

In 2020, Safe Return Autoland was introduced. Based on the Garmin Auto Land system, the Vision Jet was the first jet aircraft to receive and certify this safety feature. In 2021, the G2+ Vision Jet was introduced with up to a 25% increase in takeoff performance and Wi-Fi. The G2+ Vision Jet enables convenient regional travel by unlocking 40% more airports than previous generations when fully loaded on a hot day.

In 2023, Cirrus Aircraft introduced Cirrus IQ and Garmin's Auto Radar to the Vision Jet, providing pilots with increased situational awareness and connectivity during all stages of pre-flight and inflight activities.

Cirrus Aircraft has a long legacy of innovating and is the two-time partnering recipient of the prestigious Robert J. Collier Trophy for the inclusion of the Cirrus Airframe Parachute System and Autoland on the Vision Jet. The addition of Safe Return Autoland added a secondary safety system that, with the touch of a button, safely lands the Vision Jet at the nearest suitable airport avoiding weather, traffic and terrain while autonomously communicating with Air Traffic Control and putting emergency responders in motion.
