

DASSAULT AVIATION INTRODUCES FALCONWAYS ROUTE OPTIMISATION TOOL

News / Business aviation

Dassault Aviation unveiled a new flight planning tool that allows Falcon pilots to select the most fuel efficient route and reduce excess fuel carried using updated global wind data, optimization and performance model-specific algorithms. FalconWays, will be offered as a flight app on Dassault' FalconSphere iPad electronic flightbag and is compatible with Jeppesen and Universal flight planning tools. FalconWays was evaluated over a campaign of long flights between the U.S. and Europe and across Asia, as well as in numerous simulations. During actual flights using FalconWays, crews were able to reduce fuel consumption up to seven percent.

Dassault Aviation Chairman and CEO, Eric Trappier, commented: "Our new FalconWays flight app is part our company's broader commitment to sustainable flying. It will help Falcon customers reach a new level of operational efficiency while reducing aviation emission levels."

The new application allows pilots to download worldwide wind information and combine it with

imported operational flight plans, in-house performance tools, and vertical, lateral and mach number optimization data in order to recompute the flight plan. Falcons equipped with SATCOM can update the database en-route on long flights to further optimize the trajectory. Vertical and lateral trajectory optimization can be carried out before or during the flight.

The company will first roll out FalconWays on the new Falcon 6X extra widebody twinjet, set to enter service in the coming weeks. The app will be available on the Falcon 8X early next year, on the 7X before the end of 2024 and Falcon 2000LXS/S by early 2025. FalconWays is a pilot dedicated application, designed in-house by Dassault Engineering and flight operations teams. Their efforts have generated seven patents and led to the creation of a number of advanced algorithms for improving flight efficiency. Implemented across the Falcon fleet, the app will permit significant—fuel savings, thousands of tons of CO₂.

The new app will be demonstrated on the Dassault static display at the NBAA-BACE 2023.
