

EXECUJET EUROPE GROWS MANAGED FLEET WITH TWO GULFSTREAM AIRCRAFT

News / Business aviation

ExecuJet Aviation Group is expanding its European managed fleet with the addition of a brand new Gulfstream G650 aircraft and one Gulfstream G550 aircraft.

Niclas von Planta, ExecuJet's Vice President, Europe, says: "As we continue to receive positive feedback and referrals from our customers globally, we are experiencing very high interest in ExecuJet's aircraft management services in Europe. The G650 and G550 join the growing number of long-range and ultra-long-range Gulfstream aircraft in our fleet, showing a general trend in the region towards large-cabin jets which are capable of flying nonstop between popular city pairs such as London and Dubai.

"We are delighted to be expanding at such a pace and fulfilling our reputation as the best service provider for new, long-range aircraft in the region."

ExecuJet's aircraft management services allow all the benefits of aircraft ownership, with none of the time-consuming management responsibilities involved in aircraft operations. ExecuJet has its own MRO facilities as well as agreements with third-party maintenance centres around the world to ensure fast and efficient support.
