

FAI'S HANGAR 8 PROJECT ON TRACK TO BREAK GROUND IN JUNE

News / Business aviation

FAI Asset Management GmbH has confirmed that it will be breaking ground for its third hangar at Albrecht Dürer Airport in Nuremberg in June of this year. The new hangar, which represents an investment of €6m, will increase FAI's hangar floor space by another 4,500m², bringing the total size of the FAI facility to 13,500m². Known as Hangar 8, the new building, accommodating a wingspan of 90m, will allow maintenance work to be performed on three aircraft up to the size of an Airbus A320 and Boeing 737-800 at the same time. The new hangar comes with an attached 250m² departure building which will accommodate a vip lounge with bar, conference room and office for FAI passengers and crew.

The third hangar will also add further maintenance workspace and parking capabilities to FAI's existing site, which already incorporates administration offices, a fully serviced FBO, FAI's 24/7 air ambulance operation center, component shops and training facilities for FAI staff. The need for the extra space has been driven by the growth of FAI's own fleet, and increased demand from its

international client base. Hangars 6 and 7 will be occupied with base maintenance while the new Hangar 8 will be used predominantly for line maintenance, cleaning and parking. It is anticipated the hangar will be fully operational by end of 2016. On completion it will be one of Europe's largest hangars in general aviation.

“Our final plans were approved by the airport company in mid-January and will be submitted to the city’s building department during the first week of February. Final negotiations with contractors are ongoing, and should be completed by the end of February,” said Siegfried Axtmann, chairman of FAI group.
