

# GENEVA AIRPARK - THINK ABOUT LONG-TERM COSTS

News / Business aviation

**For some weeks now, we've been enjoying truly summer weather. What impact are the temperatures having on private aircraft? What can really stand up to hail or a heatwave? Certainly not your aircraft's instrumentation and equipment! During the summer and all year-round, hangaring your aircraft guarantees the condition of your business jet, and far from least, more comfort for your passengers. Nicolas Juriens, Director of Operations at Geneva Airpark, commented: "The cost of maintenance, especially for corrosion repair is 2 to 3 times less on an aircraft which has an air solution compared to an aircraft exposed outside"**

### *One of Geneva Airpark's hangar success story*

Zero defects on the PPI report for a Falcon 2000S recently sold! And it has been sheltered year-round in the Geneva Airpark hangar for the past 8 years.

### *Options to suit your busy schedule*

Regardless of the length of your stopover, even at the last minute, Geneva Airpark offers a wide range of sheltering choices at LSGG.

- 0 to 3hrs
- 3 to 8hrs
- 8 to 24hr or for longer periods.

Since 2022, based on their performances relating to ground movements and optimized stopovers,

as well as their environmental efficiency, Geneva Airpark offers its clients a new innovative service.

Geneva Airpark has acquired ITWGSE 7400 Zero Emission eGPUs with the following benefits for our clients:

- No more constraints imposed by the airport on the use of APUs (10' after arrival and 30' before departure, Ref AIRAC AMDT 2031)
- A reduction in costs

These new-generation, high-performance GPUs, which are powered by batteries, are highly maneuverable. They eliminate noise nuisance and fuel use and limit electricity consumption, thanks to an optimal charging time and battery life.

*CO<sup>2</sup> and NO<sub>x</sub> emissions reduced by 90-95%.*

During their first year of operation, these 100% electric eGPUs provided 900 hours of energy to our clients. In this way, Geneva Airpark actively contributes to the environmental policy developed by Geneva Airport.
