

GULFSTREAM G600 GAINS FAA STEEP-APPROACH CERTIFICATION

News / Business aviation

Gulfstream G600 has been certified for steep approach to landing by the U.S. Federal Aviation Administration, opening access to more airports around the world. G600 has successfully demonstrated its steep-approach capabilities with low-speed handling and short-field landings at London City Airport in England and Lugano Airport in Switzerland. These challenging airports require steep-approach operations, as London City has a short runway and Lugano is located in the mouth of a valley.

Mark Burns, president, Gulfstream stated: "This certification further increases global access for the G600. Building on the speed and range performance advantages that G600 customers already experience, steep-approach capability broadens possibilities and increases flexibility for travel."

G600 combines class-leading fuel-efficiency with unmatched performance capabilities and can fly 6,600 nautical miles/12,223 kilometers at Mach 0.85 or 5,600 nm/10,371 km at Mach 0.90. The award-winning interior can be configured in up to four living areas and provides the exceptional comfort of the Gulfstream Cabin Experience with abundant natural light from 14 Gulfstream Panoramic Oval Windows, 100% fresh air, whisper-quiet sound levels and a refreshingly low cabin altitude. The aircraft is equipped with the Gulfstream Symmetry Flight Deck, which is engineered for enhanced safety and features the industry's first active control sidesticks and most extensive use of touch-screen technology.
