

IS-BAO AND ARGUS EXTEND CLAY LACY AVIATION INDUSTRY-LEADING SAFETY CERTIFICATIONS

News / Business aviation

Clay Lacy Aviation has been recognized again for its safety and operational processes. The aircraft management, charter, maintenance and FBO services provider has recently been awarded the prestigious ARGUS Platinum rating by the third-party safety auditor for the 13th consecutive year. It also achieved the IS-BAO Stage III certification, the highest level, for the fifth consecutive year.

Dondi Pangalangan, Vice President of Flight Operations, Clay Lacy, commented: “Clay Lacy’s reputation, culture, and processes to mitigate risks and improve safety is outstanding. Our highest priority is keeping our clients and employees safe, while gaining efficiencies and driving continuous improvement. The ARGUS Platinum rating and IS-BAO Stage III certification validate our approach to aircraft maintenance, pilot training, and comprehensive safety management system.”

Ed Wandall, ARGUS Vice President, Business Aviation, said: “Clay Lacy has consistently demonstrated a culture of safety and excellence. To reach and maintain an ARGUS Platinum rating for nearly a decade and a half shows that Clay Lacy continues to prioritize their safety

management systems. Passengers should have the highest level of confidence in flying on Clay Lacy aircraft.”

The ARGUS Platinum rating is only awarded after a thorough review of flight operations, checking through maintenance documentation, pilot information and company operational control validations. Auditors conduct on-site inspections and review flight and pilot records, where an operator must have a robust standard of quality and excellence to be eligible for the Platinum rating.

The IS-BAO auditing process concentrates on Safety Management System (SMS) development through a gradual process, progressing from Stage I to Stage III. In this highest stage, the IS-BAO Standards Board audits operators to verify that safety management activities are fully integrated into their business and that a positive safety culture is being sustained.

These renewals build on Clay Lacy's legacy of highly rated operations. It has been awarded the Wyvern Wingman safety accreditation for 16 years, the longest continuously certified operator in the world. Clay Lacy recently was also awarded the National Air Transportation Association's (NATA) Aviation Maintenance Technician (AMT) Five-Star Award, an accolade first given to the company in 2014. It has also been recognized by the Federal Aviation Administration with its Diamond Award for Excellence in Maintenance Training/Proficiency.
