

"MUST SEE" FROM SATCOM DIRECT ON JETEXPO 2015

News / Business aviation, Manufacturer

The leader in the field of satellite communications services for business aviation, Satcom Direct, will demonstrate the latest achievements during the 10th Business Aviation Exhibition JetExpo 2015 in Moscow.

Top news - Satcom Direct Router (SDR). It is loaded with services that compress and cache data, so that you have maximum bandwidth for the transmission of information, with no need to modify other elements of the system.

The device is able to provide multiple Wi-Fi networks from a single router, this equipment allows you to set individual access for each data filter, for the main passenger and accompanying persons. Priority can be configured for a specific device.

Another new product, which can be seen on the stand - Global Voice and Text (Global VT), which allows passengers to stay in touch on usual GSM phone number throughout the flight.

This service is implemented by combining capabilities of IP telephony and signal output in the GSM roaming network through Satcom Direct own data center. The service is available wherever there is Inmarsat SwiftBroadband or ViaSat Yonder network coverage. During the exhibition, anyone will be able to test this new product and ensure excellent the quality of communication.

The company remembers about technical staff - you will have the possibility to see Unity Kit, intended for diagnostic and configuration of satellite equipment. Unity enables avionics technicians to service various satcom system using an iOS device as the interface. Simply connect via the system-specific terminal adapter and use the Get Satcom® and getORT+® mobile applications for troubleshooting, diagnostics and configuration information.
