

NETJETS BECOMES FLEET LAUNCH CUSTOMER FOR BOMBARDIER GLOBAL 8000

News / Business aviation, Manufacturer

NetJets will become the fleet launch customer for the Global 8000 aircraft, after a new firm order for four Global 8000 aircraft, valued at \$312 million dollars and converted eight existing orders for Bombardier products. This transaction adds to Global 7500 aircraft already on order and in service. NetJets will build a 24-strong fleet of the performance leading Global 8000 aircraft, as they will also be working with Bombardier to upgrade the entire in-service Global 7500 fleet to Global 8000 jets when they begin taking delivery of its new flagship aircraft. NetJets could subsequently grow its fleet—the world’s largest, most diverse fleet in private aircraft—through a series of options that could be exercised progressively over the coming years.

Introduced at EBACE 2022, Global 8000 features an industry-leading range of 8,000 nautical miles and an unbeaten top speed of Mach 0.94. This ultimate all-in-one business aircraft will offer NetJets Owners a unique blend of outstanding performance, the smoothest ride, and an exceptional passenger experience focused on uncompromising safety and service standards that only NetJets can provide.

Eric Martel, President and CEO, Bombardier, commented: “The new Global 8000 aircraft is the

ultimate solution for NetJets' discerning Owners, offering a truly seamless private aviation experience. NetJets' experience and expertise make them the ideal partner to unlock the full potential of this revolutionary Mach 0.94 business jet in a large fleet context. Our valued relationship continues to grow stronger, and we are proud to share this historic milestone together."

Patrick Gallagher, NetJets' President of Sales, Marketing, and Service, said: "The new Global 8000 will help us to continue offering our Owners, specifically our international travelers, the pinnacle in unforgettably personalized experiences aboard the finest ultra-long-range aircraft available. With inventory sold out through 2023 in the U.S., we are continuing to invest in further expansion for prospective Owners in North America and across the globe. In fact, by the end of 2023, we are proud to share that our worldwide fleet will be approximately 30% larger than it was in the beginning of 2022."

The discerning Global 8000 business jet features the most generous cabin size in the industry, with the lowest cabin altitude in its class of 2,900 feet when flying at 41,000 ft. It is also equipped with Bombardier PureAir and advanced HEPA filter technology for the fastest fresh air replacement.

The Global 8000 aircraft delivers when it comes to in-flight experience. The cabin incorporates the revolutionary features introduced on the Global 7500 aircraft that dramatically improve passenger comfort. The aircraft also features the innovative Nuage seat, with the first-ever zero gravity position in a business jet, allowing NetJets Owners to arrive at their destinations revitalized and refreshed.

An exemplary commitment to detail is assured on the new Global 8000 aircraft, including an available Principal Suite with a full-size bed. Revolutionary cabin entertainment control and connectivity, the intuitive nice Touch CMS and OLED touch dial, Bombardier's l'Opéra directional audio sound system and available 4K monitor, also ensure passengers will receive an unrivalled cabin experience.

Performance-wise, the new Global 8000 aircraft can efficiently transport NetJets Owners to a wide variety of destinations both faster and farther than ever before. With its exceptional class-leading range and short-field performance, even more exclusive city pairs are now achievable, including Dubai-Houston, Singapore-Los Angeles, London-Perth, and many others.
