

SATCOM DIRECT EXPANDS MANUFACTURING AND REPAIR CAPABILITIES

News / Business aviation

This official approval by the FAA marks SD as an authorized manufacturer for avionics, as well as an authorized maintenance repair and overhaul center for all SD avionics.

The certification was awarded for its development of the SD WiFi Hub, the standalone router and WiFi solution that enables onboard voice and data communications. Over the last five months, the associated processes, manufacturing quality manuals, and the physical setup at their World Headquarters location in Melbourne, FL, have been audited by the Orlando Manufacturing & Inspection District Office (MIDO), in order to gain the approval.

The PMA certification will allow SD to use Supplemental Type Certificates (STCs) to quickly obtain approvals on future hardware developments.

“This milestone accomplishment demonstrates our ongoing commitment to aerospace manufacturing, and our continued efforts to expand our capabilities as a technology innovator,” said Ken Bantoft, SD Chief Technology Officer.

Satcom Direct (SD) provides global connectivity solutions for business and general aviation, military, government, and heads of state aircraft, as well as operations in areas with connectivity limitations such as remote locations, large scale events, and disaster recovery. SD is a technology innovator. Since 1997, its teams have worked to advance the technology of connectivity, making SD the first in the marketplace to deliver numerous advancements and capabilities. The company is a premier Inmarsat Distribution Partner (including Jet ConneX), Iridium Service Partner, ViaSat preferred reseller, and the Exclusive Service Provider for SmartSky Networks.
