

SATCOM DIRECT MODERNIZES FLIGHT OPERATIONS WITH LAUNCH OF SD SCHEDULER

News / Business aviation, Events / Festivals

Ahead of this year's NBAA-BACE, Satcom Direct (SD), the business aviation solutions provider announces the launch of SD Scheduler, a cloud-based software solution. SD Scheduler further enhances the SD ecosystem, providing centralized management of aircraft and flight information, as well as customized reporting and analytics to support the entire flight operation.

SD Scheduler optimizes work flows and simplifies communication across all parts of the operation, from pre-flight planning to post-flight reporting. Scalable and customizable, SD Scheduler meets the unique requirements of individual flight departments, making data more available to support the needs of today's dynamic flight operations.

SD FlightLogs?, the post-flight component of SD Scheduler, captures automated information for accurate and efficient post-flight reporting. This data moves efficiently through the SD Pro ecosystem to update CAMP Systems Inc.'s Maintenance Management system, which synchronizes the aircraft with flight operations and enables aircraft maintenance status to be viewed in SD Pro and SD Scheduler. The reliable and secure design meets corporate IT cybersecurity needs, and SD's Agile software development continuously enhances the system.

“In SD Scheduler we have created a continually evolving software system that adapts to the changing business aviation environment. Through its capacity to synchronize with every element of flight operations, it supports the ability to align all members of the flight team - as well as passengers, corporate offices, and vendors - to keep operations secure, streamlined and efficient. Integration with third parties also gives customers the flexibility to create a product that enhances their daily operations. Our aim is to continue to deliver proactive tools that deliver up-to-date information to keep flight departments efficient, safe and seamlessly synchronized,” said Jim Jensen, SD Founder and CEO.

SD Scheduler is currently being implemented with the first twelve customers, and is commercially available by additional flight departments. SD will be demonstrating the benefits of SD Scheduler and SD Pro at this year's NBAA, **booth 250 and static display SD40.**
