

SEA PRIME: SAN DONATO GROUP OFFERS COVID-19 TESTS AT MILANO PRIME

News / Business aviation

SEA Prime, a SEA Group company that, with the Milano Prime brand, is the first business & general aviation airport operator in Italy and one of the leaders in Europe, announces its collaboration with the Gruppo San Donato, the first Italian hospital group, through the activation of a new service: the performance of nose-pharyngeal swabs in private regime for the detection of the Sars Cov-2 virus.

The service provides immediate assistance and availability from Gruppo San Donato's main outpatient centres of excellence: Punti Raf First Clinic of San Raffaele and Palazzo della Salute GSD where it is possible to receive the swab in “fast track” mode.

Alternatively, the swab can be performed at one’s permanent or temporary domicile (including hotels) in Milan and its province and at Milano Prime Terminals at both Linate and at Malpensa.

The new dedicated service confirms SEA Prime's increasing attention towards passengers and operators: in addition to offering Italian and international customers an additional channel to meet mandatory testing requirements, it also provides important benefits in terms of health and safety of their travel experience.
