

HARTZELL AERO FRIEDRICHSHAFEN PRESENCE FOCUSES ON PETROLEUM AND EPOWERED FLIGHT

News / Events / Festivals, Manufacturer

Hartzell Propeller will feature the latest iterations of props for petroleum, electric and hydrogen propelled aircraft at AERO Friedrichshafen to be held April 27-30 in Germany. Hartzell’s contingent of propeller specialists, including sales, engineering and executives will be at Exhibit Hall A3-116.

“We have active General Aviation propeller technology initiatives underway in every propulsion segment that involve most of leading new aircraft manufacturers,” said company President JJ Frigge. “The full Hartzell Propeller team is looking forward to a great event in conjunction with our European Recommended Service Facilities and Service and Support Centers,” he added.

The European support contingent co-exhibiting with Hartzell Propeller includes:

England

Brinkley Aerospace

Proptech

France

Technic Aviation

Germany

HOFFMANN PROPELLER GmbH & CO., KG.

Röder Präzision GmbH

Norway

Norrønafly Propeller & Parts

Switzerland

RUAG Ltd

GAMA Electric Propulsion Innovation Committee

During AERO, Hartzell will be meeting with a number of aircraft manufacturers working in the electric, hybrid space. In addition, the company will take part in General Aviation Manufacturers Association (GAMA) Electric Propulsion Innovation Committee (EPIC) meetings. Hartzell's engineering and sales representatives will participate in the GAMA discussions of this emerging movement.

Hartzell has dedicated tens of thousands of engineering and development hours to electric, hybrid and hydrogen powered aircraft since 2019 and it continues to make advancements in tooling, manufacturing processes, and lightweighting materials. Using an innovative blend of sophisticated engineering analytics, certification skills and world-class manufacturing technologies, Hartzell is working closely with several OEMs within these emerging industries to fine-tune their propeller applications.

Among the Hartzell props on display will be a Bantam propeller, the company's lightest weight carbon fiber propellers at the venue. A two-blade Bantam is around 25 pounds, and a three-blade Bantam is only about 35 pounds. Hartzell continues to focus on developing technology in the lower horsepower lightweight arena. A number of new aircraft manufacturers will be displaying Hartzell equipped aircraft in AERO's indoor static display, including Cirrus, Daher's TBM and Pilatus.
