

BOMBARDIER BUSINESS AIRCRAFT EXPANDS ITS CHALLENGER 300 AIRCRAFT TRAINING CAPABILITIES IN DALLAS

News / Business aviation, Maintenance / Trainings, Manufacturer

- Bombardier *Challenger 300* series aircraft are the best-selling business jets of the last decade
- More than 5,300 pilots and technicians have received training from Bombardier's Montreal and Dallas training centres in 2016 – a total of 34,400 hours of flight and technical training
- Additional *Challenger 300* aircraft simulator now available at Bombardier's Dallas Training Centre

Bombardier announced that it expanded its *Challenger 300* training capacity in Dallas, complementing the existing *Challenger 350* aircraft training program. The new *Challenger 300* simulator was certified at Bombardier's Dallas Fort-Worth (DFW) Airport Texas facility by the Federal Aviation Administration (FAA) in May 2017 and is now ready for training.

With six Level D full-flight simulators, one flight training device, 21 multimedia, interactive classrooms, and numerous part task training devices, Bombardier's Dallas Training Centre can train up to 3,000 pilots and 280 maintenance technicians each year.

“As the aircraft manufacturer, no one knows the aircraft better. Bombardier is committed to offering in-house OEM developed courseware for flight and technical training, so our operators have the most up to date, tailored knowledge and technology at their fingertips,”

said Andy Nureddin, Vice President of Customer Support and Training, Bombardier Business Aircraft. “We not only design, build and maintain the aircraft, we fly them too, so operators who train with us benefit from our real world expertise by learning from one of 140 world-class instructors who fly or maintain the aircraft themselves.”

Bombardier Business Aircraft operates a total of 11 aircraft simulators – six in Dallas, five in Montreal – across two world-class training centres. As Bombardier’s Authorized Training Provider (ATP) for *Challenger* Series, CAE also delivers business aviation training for Bombardier aircraft on 16 full-flight simulators located across CAE’s global network, including centres in Amsterdam, the Netherlands; Burgess Hill, United Kingdom; Dallas, Texas, USA; Dubai, United Arab Emirates; and Morristown, NJ, USA.

Challenger 300 series aircraft: The *Challenger 300* business aircraft – the true executive office for the skies. The clean sheet design business jet that defined the super-midsize class also empowers passengers with a smooth ride, true U.S. coast-to-coast range and unmatched room in which to conference and work. Industry-leading connectivity, immersive sound and ergonomically-positioned touch screens are seamlessly integrated to create an intuitive and incomparable cabin experience.
