

CZECH AIRLINES TECHNICS HAS FIVE NEW LINE MAINTENANCE CUSTOMERS AND NEW CERTIFICATIONS

News / Airlines, Maintenance / Trainings

Czech Airlines Technics (CSAT), a daughter company of the Czech Aeroholding Group providing aircraft repair and maintenance services, has won five new line maintenance customers, including American Airlines, Cyprus Airways, Air Cairo and Go2Sky, all of which operate their flights from Václav Havel Airport Prague. CSAT mechanics will also provide line maintenance services for the Russian's Pobeda aircraft servicing the airline's route to Moscow from Airport Karlovy Vary.

“I am glad that airlines which decided to offer flights to Prague have chosen Czech Airlines Technics to service their aircraft. It proves that air carriers value the quality and experience of our employees, supported by fast and expert reactions in cases where aircraft defects must be repaired quickly to ensure a speedy return to operations. We have recently expanded our customer portfolio and we also provide on-call line maintenance at Airport Karlovy Vary, located within reasonable travel distance,”said Pavel Haleš, Chairman of the Board of Directors at Czech Airlines Technics.

American Airlines, the largest air carrier in the world, has also decided to start using the services of Czech Airlines Technics. The airline has operated regular scheduled flights from Prague to Philadelphia on a daily basis since 5 May 2018 and CSAT’s Line Maintenance consists of checking Boeing 767-300 aircraft.

“Prague is an exciting new addition to American’s global network,” said Oliver Barnes, Senior Manager, Contract Line Maintenance UK, Ireland, Europe & Middle East for American Airlines. *“It is essential that we have strong partners such as Czech Airlines Technics in place to ensure American’s success in new markets and we look forward to working closely with them going forwards.”*

Other customers with whom Czech Airlines Technics has recently entered into line maintenance agreements are, for example, Cyprus Airways, which launched regular scheduled flights from Prague to Larnaca in Cyprus this June using Airbus A319s, Air Cairo, operating its routes to more destinations in Egypt with Airbus A320 and Go2Sky, which has leased Czech Airlines one of its Boeing 737-400 for the whole summer season.

Moreover, the company has recently received two new certificates allowing it to confirm aircraft post- line maintenance operational readiness. The first certificate was awarded to CSAT by the Egyptian Civil Aviation Authority regarding Egypt Air aircraft. Until now, permits were always issued only ad hoc. The second certificate was issued by Mongolian authorities for MIAT Mongolian Airlines. CSAT will perform A-checks for its aircraft this summer, i.e. the highest level of line maintenance checks.

Line maintenance of aircraft is performed either on a regular basis (e.g. daily or weekly) or ad hoc. It includes a thorough aircraft check, the refilling of all fluids, the completion of minor repairs, the checking of individual aircraft parts and an evaluation of whether or not an aircraft is fully functional and ready for another flight.

About Czech Airlines Technics

Czech Airlines Technics, a daughter company of Czech Aeroholding, focuses primarily on aircraft repair and maintenance and aircraft equipment within the scope of base maintenance, line maintenance, components maintenance, engineering and landing gear maintenance. Last year, the company processed over 100 base maintenance jobs on B737, A320 Family and ATR aircraft, primarily on foreign customers' aircraft. Among the most important clients of Czech Airlines Technics are Czech Airlines, Finnair, Transavia Airlines, Germania, Travel Service, KLM Royal Dutch Airlines and NEOS. Above the scope of general maintenance, Czech Airlines Technics' portfolio of services provided comprises the ability to perform various modifications and service bulletins, structural repairs, engine exchanges and exchanges and repairs of landing gear and other aircraft components. It is also interesting to mention the modification of Split Scimitar Winglets of Boeing 737NG aircraft, performed by Czech Airlines Technics as the first company in continental Europe, and Sharklet modifications of Airbus A320 aircraft.
