

FLIGHTSAFETY INTERNATIONAL ADDS GULFSTREAM G650 CPDLC TO ELEARNING COURSES

News / Business aviation, Maintenance / Trainings

FlightSafety International has added Gulfstream G650 Controller Pilot Data Link Communication to its extensive series of eLearning courses and CPDLC iFlightDECK subscription-based application.

The three-hour eLearning CPDLC scenario-based course is designed to familiarize pilots with CPDLC/ADS-C operations in normal and abnormal situations. The course will take them through a flight planning phase, as well as flights over the Atlantic and Pacific oceans.

The iFlightDECK app provides online access to the latest information needed to help FlightSafety's customers understand and operate their aircraft safely and efficiently.

The Gulfstream G650 CPDLC app presents a comprehensive series of CPDLC and ADS-C tasks. Its interactive representation of the Gulfstream G650 cockpit presents scenarios that help users to fully understand and correctly perform necessary actions. The FMS enables pilots to engage in CPDLC and ADS-C operations as they would in the actual aircraft.

FlightSafety also offers CPDLC eLearning courses for the Bombardier Global Express, Global 5000, Global XRS, Challenger 300, Challenger 350, Challenger 605 and Challenger 650; Dassault Falcon 900EX EASy II, Falcon 2000 EX EASy II, and Falcon 7X EASy II; Embraer Legacy 650; Gulfstream G280, Gulfstream G450 and Gulfstream G550 aircraft as well as Garmin G3000 and G5000 avionics suites.
