FLYING COLOURS CORP. COMPLETES ITS FIRST HONEYWELL JETWAVE™ KA-BAND INSTALLATION

News / Business aviation, Maintenance / Trainings

The Flying Colours Corp. avionics team has completed its first installation of the Honeywell JetWave™ Ka-Band satellite communications system. Work on attaching the LRU's, radome and tail mounted antenna has just finished at the company's Peterborough, Ontario facility, making it one of the first Bombardier Aerospace Authorized Service Facilities, ASF, to fit the system. The connectivity upgrade is part of a wider Bombardier Global Express aircraft cabin refurbishment project which is expected to be completed by the end of July.

The installation of the high-speed data delivery system will ensure that the undisclosed Global customer can enjoy the same level of avionics and connectivity, as purchasers of brand new Bombardier Global aircraft who can select the system as a line fit option. "Our customer travels extensively for business and needs uninterrupted connectivity globally. We advised him to install the Honeywell system as it gives him flexible, high-speed, and modern technology, that will fulfill his need to be continuously connected," says Eric

Gillespie, Executive VP, Flying Colours Corp.

Ka-Band connectivity delivers ultra-high speed connectivity to the business jet market, and ensures a seamless connectivity experience via Inmarsat's Global Xpress (GX) Aviation service, which delivers high speed broadband via its global satellite network. The increased data speed enables business jet users greater access to live TV and video streaming across multiple on-board devices. It also supports uninterrupted WiFi enabled email, web-browsing, video conferencing, data file transfers, and voice and text capabilities.

"We are pleased to be able to maximize our status as an ASF to offer, and fit these state-of-the-art avionics system. As an increasing number of owners of mid- to long-range aircraft want to upgrade their connectivity, we are well positioned to provide the service through our in-house avionics experience and knowledge," adds Gillespie.

The avionics upgrade forms just one part of a major overhaul for the Global Express aircraft which included a pre-buy review, maintenance inspections, full interior and exterior refurbishment, IFE upgrades, and a floorplan modification.

About Flying Colours Corp:

With facilities in Canada, the USA, & Singapore, global aircraft services company Flying Colours Corp, brings over 25 years of experience to every facet of its business, which includes Green Completions, Interior Refurbishment & Modifications, Heavy Maintenance, Exterior Paint, Special Mission Modifications, Connectivity and Avionics Installations.

Flying Colours specializes in all mid to large sized business aircraft, including the Bombardier Global Express and Challenger families, Dassault Falcon, Beechcraft/Hawker and Gulfstream models. Flying Colours is an Authorized Service Facility for Bombardier and a Bombardier Preferred Completion Center.
