

FLYSCHOOL AIR ACADEMY EXPANDS ITS SIMULATOR FLEET WITH THIRD ALSIM AL250

News / Maintenance / Trainings

Flyschool Air Academy acquires its third AL250 simulator for commercial pilot training. The school once again chose ALSIM for the IFR training of its students. The AL250 simulator addresses initial phase training needs (PPL, CPL, IR/ME) and is SEP/MEP re-configurable simulator certified as an EASA FNPT II. In addition, it offers both classic and glass cockpit for each flight model at the simple flick of a switch. This device has been extremely well received since its creation and more than 100 of these have already been installed and are in successful operation worldwide. The purchase of this simulator is accompanied by a review, update, and standardization at the software and hardware level of the rest of the simulators that ALSIM has previously supplied to the school at each base.

Victor Valero, Head of Training, from Flyschool Air Academy, commented: "We chose ALSIM again because of the brand's great commitment to the school and the good relationship that has been established between the professionals of both companies. We have been working for years

with the ALSIM engineering team for the continuous improvement and development of the simulators, which allows us to have a product tailored to our students and the quality standards of the school."

Audrey Jeffroy, ALSIM Sales Director, said: "We are delighted to deliver this third AL250 to Flyschool Air Academy, and would like to thank them for their confidence. The installation of this AL250 in Madrid and the upgrade of the previously delivered simulators will allow them to offer high-quality training standards, and train a higher number of students and is a good sign of confidence not only in our simulators but also in our after-sales service. We look forward to continuing this successful cooperation between our companies."

Flyschool Air Academy is an ATO exclusively dedicated to aircraft commercial pilot training. The school is located in Madrid and Mallorca (Spain), where it totalizes 5 professional flight simulators, 20 Cessna, Piper, Cruiser and Tecnam aircraft, and its own maintenance center. Today there are about thirty employees (most of them being pilots or co-pilots) to train the best pilots and the best candidates like the integrated programs, APS MCC, and PBN.
