

METROJET HK MRO EXCELS IN ENGINE CHANGE AND AIRCRAFT DISINFECTION DURING CORONA CRISIS

News / Maintenance / Trainings

Metrojet Limited has been busy with engine changes, base maintenance, modification programs and aircraft disinfection projects throughout these CoVID-19 pandemic times. From January through to July this year, our Rolls-Royce-exclusively-certified MRO has completed multiple engine changes on BR725/710 and Tay 611-8C for various types of Gulfstream aircraft, alongside scheduled maintenance inspections, maximising the use of ground time due to the current limited flying.

In addition to performing maintenance, aircraft interior hygiene levels have become a new priority concern to all our aircraft users. Metrojet’s aircraft disinfection services are both Gulfstream and Bombardier proven, with all work performed in accordance with Gulfstream MOL-20-0005 or Bombardier AW000-25- 001 REV2 guidelines. Our experienced team remains available 7 days a week to be our customer’s safe.

“Our professional and priority response to clients’ maintenance and operational requests earns our MRO an exceptional reputation,” says Mr. Gary Dolski, CEO of Metrojet Limited. “We have been taking great care of our clients’ valuable assets and we remain very appreciative of the support provided by our business partners and customers throughout

China and the Asia Pacific region during these most challenging times.”

Established in 1997, Metrojet as part of the Kadoorie Group, pioneered business aviation services in Hong Kong and remains one of the foremost safety and customer-focussed business jet operators and maintenance providers in the Asia Pacific region. The company provides all-inclusive aircraft management, maintenance and aviation consultancy services to our growing business aviation customer base.
