

SAXONAIR ENHANCES HEALTH TRAINING FOR CREW

News / Maintenance / Trainings

SaxonAir Charter has invested in **enhanced training for their crew** on in-flight health and safety. The training ensures all staff on board are able to better deal with any illness or injuries that may arise mid-flight, in addition to their standard crew training.

The course was held by MedAire and the crew qualified after a period of training at Inflight Jet Centre, Stansted Airport.

“I believe it is accepted by the pilots and cabin staff that following attendance of the MedAire course, they are now better prepared to meet today’s increased demand for passenger safety and welfare in addition to SaxonAir’s ongoing commitment to enhancing training requirements to facilitate a safer and more acceptable environment for our clients.”

Phil Stead, head of SaxonAir Crew Training said: “I believe it is accepted by the pilots and cabin staff that following attendance of the MedAire course, they are now better prepared to meet today’s increased demand for passenger safety and welfare in addition to SaxonAir’s ongoing commitment to enhancing training requirements to facilitate a safer and more acceptable environment for our clients.”

In addition to the course, SaxonAir made it their highest priority to purchase defibrillators for their longer range aircraft ensuring safety to all passengers and crew. Pilots and flight attendants of

SaxonAirs midsize & heavy jet fleet are now proficient in dealing with illness and injury in many areas including; CPR techniques and AED use, hypoxia signs and response, altitude physiology & trauma management.
