

THRUST FLIGHT EXPANDS EAST WITH NEW VIRGINIA CAMPUS AND HAMPTON UNIVERSITY PARTNERSHIP

News / Maintenance / Trainings

Thrust Flight announced a new partnership with [Hampton University's Department of Aviation](#) to serve as the flight-training partner for the school's Flight Education curriculum. The partnership is anchored by a new campus near Newport News/Williamsburg International Airport (PHF) in Virginia, which will also offer Zero Time to Airline pilot training and Aircraft & Powerplant mechanic training to the public. The new campus marks Thrust Flight's first location in Virginia and on the east coast, extending its footprint beyond its home base in Texas and additional school in Arizona.

Hampton University partnership

Thrust Flight will serve as the flight-training partner for Hampton University's Department of Aviation, delivering Private, Instrument, Commercial and Flight Instructor training under its own FAA Part 141 certificate to students enrolled in Hampton's Flight Education curriculum. Hampton retains ownership of the degree program, curriculum, accreditation and admissions, while Thrust Flight provides the aircraft, certificated instructors and day-to-day training operations.

The partnership is structured in two phases. Thrust Flight will first operate as Hampton's authorized flight-training provider. In the second phase, the company will help Hampton pursue its own FAA Part 141 Pilot School certificate, including a gap analysis, course outline development and support through the FAA application process, so Hampton can eventually run its flight program under its own authority without interrupting student training. The Hampton program is targeted to launch for the Fall 2026 term, with classes beginning August 26.

Patrick Arnzen, CEO of Thrust Flight commented: "This partnership lets us bring our training model to a historic institution that's serious about growing its aviation program,. Hampton University has a clear vision for where it wants this program to go, and we built this agreement to get them there, starting with flight training now and moving toward their own certificate down the road."

"Hampton University has trained generations of leaders, and now we're giving our aviation students a direct runway into the cockpit," said Joyce Shirazi, Dean of School of Engineering, Architecture and Aviation at Hampton University. "This partnership means our students can complete rigorous, industry-aligned flight training without ever leaving their academic home, and it sets us on a path toward operating our own certified flight school in the years ahead."

Zero Time to Airline now open in Virginia

Thrust Flight will also open its flagship Zero Time to Airline program at the Virginia campus, available to the public. The program takes students from no flight experience to airline-ready in as little as 12 to 18 months, training in Piper Archer and Seminole aircraft. Many graduates of the Zero Time to Airline program enter the workforce through Thrust Flight's partnerships with regional carriers including SkyWest and Envoy Air.

New A&P mechanic school also open to the public

The Virginia campus will also house a new Aircraft & Powerplant Mechanic School, open to the public. The FAA Part 147 program prepares students for Airframe and Powerplant certification in as little as 10 to 12 months, following the same accelerated model Thrust Flight uses at its Texas campuses. The program gives students a direct path into aircraft maintenance careers without a four-year degree.

23 AUGUST 2026
