

45-YEAR RELATIONSHIP BETWEEN COLLINS AEROSPACE AND AIRBUS

News / Manufacturer

45-year relationship, it is a long term, a milestone, an important road made together - Collins Aerospace and Airbus. The relationship with Airbus dates back to the A300, the first Airbus aircraft. The milestones achieved are due to the strong collaboration and hard work from both companies. What is on the celebration program:

- **Delivery of the 1000th nacelle for A320neo program out of Foley, Alabama**
- **Delivery of the 9000th V2500 nacelle**
- **Continued support for the A220 nacelle program ramp-up**

These milestones were commemorated at a ceremony hosted by Collins Aerospace at its Foley, Alabama facility. More than 900 employees at the facility were joined by leaders from Airbus in the U.S., as well as Alabama Congressman Bradley Byrne, to mark the milestones. Collins Aerospace is a unit of United Technologies Corp.

"This celebration and the work we do with Airbus goes far beyond Foley today. Teams across our worldwide sites are working with pride and commitment to provide on-time delivery and quality,

and ensure that our relationship with Airbus remains strong for years to come," said Jim Pollock, Collins Aerospace Vice President of Airbus Programs. "We're now integrating A320neo engines with our advanced nacelle systems on three continents and continuing to introduce new manufacturing innovations -- such as robotic painting systems and advanced fastening tools -- to meet the increasing global demand for air travel."

In support of the Airbus A320neo program, Collins has invested hundreds of millions of dollars to expand manufacturing capacity at six global sites.

Collins Aerospace's innovative nacelle system for the Airbus A320neo is performing with 99.99% percent dispatch reliability. There are currently more than 750 Collins nacelles operating on A320neo aircraft with 32 airlines.

"In more than a million fleet hours since the A320neo's entry into service, there have been less than 10 delays and zero cancellations associated with the Collins nacelle," said Pollock. "This type of reliability is a testament to the commitment and dedication of the program, engineering, and airline support teams."
