

BIRTHPLACE OF AVIATION, DAYTON, OHIO, SELECTED BY JOBY AVIATION FOR FIRST SCALED MANUFACTURING FACILITY

News / Manufacturer

Joby Aviation plans to locate its first scaled aircraft production facility in Dayton, Ohio, the birthplace of aviation. The Wright Brothers, who invented and flew the first powered aircraft, lived and worked in Dayton and opened the first airplane factory in the United States there in 1910. The city is also home to Wright-Patterson Air Force Base, and the headquarters of the U.S. Air Force Research Laboratories which has played a key role in supporting Joby development. Joby plans to build a facility capable of delivering up to 500 aircraft per year at the Dayton International Airport, supporting up to 2,000 jobs. The 140-acre site it has selected has the potential to support significant further growth over time, providing enough land to build up to two million square feet of manufacturing space. Construction of the scaled Ohio facility is expected to start in 2024 and it is expected to come online in 2025. Joby plans to use existing nearby buildings to begin near-term operations.

JoeBen Bevirt, Founder and CEO of Joby, commented: “We’re building the future of aviation right where it all started, in Dayton, Ohio. The Wright Brothers harnessed revolutionary technology of their time to open up the skies, and we intend to do the same — this time, bringing quiet and

emissions-free flight that we hope will have an equally profound impact on our world. The U.S. continues to lead the way on introducing this technology, with unprecedented levels of support across all areas and levels of government. We're incredibly grateful to Governor Mike DeWine, Lt. Governor Jon Husted, Senator Sherrod Brown, Senator JD Vance, Representative Mike Turner, and the team at JobsOhio for their support, as well as the representatives of the many other states we worked with during this process. Our partnership with Ohio is a great example of how successful public-private partnership amongst industry, local, state and federal government can bring important new technology to life."

The State of Ohio, JobsOhio and local political subdivisions have offered incentives and benefits of up to \$325 million to support the development of the facility, while Joby plans to invest up to \$500 million as it scales operations at the site. Joby is also announcing today that it has been invited by the U.S. Department of Energy to submit a Part II Application for financing under the Title XVII Loan Guarantee Program, which provides access to low-interest loans for clean energy projects and would support the scaling of the facility.

Joby's long-term investor, Toyota, who worked with Joby on the design and successful launch of the company's Pilot Production Line in Marina, California, plans to continue to advise Joby as it prepares for scaled production of its commercial passenger air taxi in Ohio.

Joby plans to start hiring in the coming months, with early roles expected to focus on the build out of the scaled facility and the machining of parts that will initially be incorporated into Joby's California low-volume production line. Those interested in applying for roles at Joby's Ohio facility can register their interest at www.jobyino.com.

Joby's production aircraft is designed to transport a pilot and four passengers at speeds of up to 200 mph, with a maximum range of 100 miles and a revolutionary quiet noise profile that is barely audible against the backdrop of cities. The company plans to operate these aircraft as part of aerial ridesharing networks in cities and communities around the world, starting in 2025, building on partnerships it has developed with Delta and Uber.
