

DAHER REACHES THE 20-DELIVERY MILESTONE FOR ITS NEW TBM 960 VERY FAST TURBOPROP AIRCRAFT

News / Business aviation, Manufacturer

Deliveries of the latest member in Daher TBM very fast turboprop aircraft family – the TBM 960 – have reached 20, with the momentum continuing to meet the company’s solid order book. Of this total, 17 TBM 960s have been received by customers in the United States, with these handovers initiated by Daher following the aircraft’s certification on June 23 by the U.S. FAA airworthiness authority. The three other TBM 960s were delivered to customers in Europe based on the previous certification approval by EASA.

Nicolas Chabbert, the Senior Vice President of Daher’s Aircraft Division, commented: “The TBM 960’s benefits of digital power for enhanced sustainability, a superior piloting experience and increased cabin comfort has created a strong demand for our latest TBM version. We’re nearly fully booked for 2023, with a significant percentage of these orders coming from customers in North America and Europe.”

The recipient of the 20th-delivered TBM 960 was Johnie Weems, a businessman from South Florida, who has owned three previous-version TBMs. “The TBM 960’s advanced technology reduces the single pilot’s workload, which ultimately leads to safer flights,” he commented. “I want

to thank the Daher team for having an innovative mindset and pursuing the quest to make an already very capable aircraft even better.”

After taking delivery of his new TBM 960 at the factory of Daher’s Aircraft Division in Tarbes, France, Weems performed the transatlantic flight back to South Florida with legendary ferry pilot, Margrit Waltz. “This was truly an amazing experience and an eye-opener as to the capabilities of the TBM. I was amazed at how simple the TBM 960 made the crossing.”

Key new features of the TBM 960 are its advanced Pratt & Whitney Canada PT6E-66XT engine and Hartzell Propeller’s five-blade Raptor™ composite propeller, both of which are linked to the dual-channel digital Engine and Propeller Electronic Control System (EPECS).

With the EPECS, the PT6E-66XT’s startup is fully automated after a single-switch activation. The cockpit’s power lever becomes an e-throttle, using a single forward position from takeoff to landing – with the EPECS optimizing powerplant performance throughout the flight envelope while reducing pilot workload by integrating all functions and protecting the engine’s life.

The Raptor™ propeller is fully integrated into the propulsion system. It is specifically designed to reduce overall weight and improve the TBM 960’s takeoff distance, climb and cruise speed. Turning at 1,925 rpm during maximum power output, the Raptor contributes to limiting noise and vibration. Its sound level during takeoff is just 76.4 decibels, meeting the most stringent international noise standards.

In retaining the performance of Daher’s TBM 900-series aircraft, the TBM 960’s digital control enables the pilot to fly with more precise settings. At Daher’s recommended cruise setting of 308 kts., the fuel consumption is only 57 U.S. gallons per hour – a 10 percent fuel economy compared to the maximum cruise setting for more sustainability.

Daher’s use of digital power for the TBM 960 extends into the aircraft’s Prestige cabin, featuring an all-new environmental control system produced by Enviro Systems Inc. Other enhancements include LED ambience strip lighting integrated into both sides of the overhead ceiling panel, and electronically-dimmable windows – all controlled by a Passenger Comfort Display (PCD). Enhancements in the cabin’s style and comfort also include new ergonomically enhanced seats, USB-A and USB-C power plugs, along with individual cupholders and headset hangers for each occupant.

The TBM 960 retains safety features that have contributed to the TBM 940’s commercial success. Notably, the Garmin G3000® integrated flight deck enables the TBM’s e-copilot® functions: icing protection system; flight envelope monitoring through the Electronic Stability and Protection (ESP) and the Under-speed Protection (USP) systems; the Emergency Descent Mode (EDM) function; as well as the game-changing HomeSafe™ emergency autoland system.

To date, Daher has delivered more than 1,080 TBMs in the aircraft’s 12 different versions, with approximately 80 percent of them acquired by North American customers – a majority of which are based in the United States. Daher’s Aircraft Division coordinates its presence in the market through the North American headquarters and support facility at Pompano Beach, Florida.
