

LIEBHERR SUPPLIES AIR MANAGEMENT SYSTEM FOR DEUTSCHE AIRCRAFT D328ECO

News / Manufacturer

Deutsche Aircraft has selected Liebherr to supply the air management system for the D328eco aircraft, a platform that is accelerating the aviation industry's transition towards lower emissions. Liebherr-Aerospace Toulouse will design, supply and service the integrated air management system for the D328eco. The system meets the efficiency, weight, and performance requirements of this modern aircraft, offering cabin comfort and optimised power consumption.

Maximilian Fahr, Vice President Supply Chain at Deutsche Aircraft, commented: “Liebherr-Aerospace is a reputable partner in the aviation industry not only with many other airframe OEMs but also a close partner for years with Deutsche Aircraft. On the D328eco program, we are pleased to have Liebherr join us, also as the supplier for the integrated air management system and thereby further reduce development times. This latest contract is based on and will further strengthen the reliable partnership we have on the flap and spoiler actuation system and reach another important milestone for the D328eco program. Deutsche Aircraft, as the only German OEM for regional aircraft, is teaming up with the finest suppliers of the industry to have the most competitive Turboprop in service. The cooperation with Liebherr perfectly fits in that picture.”

Alex Vlieland, Chief Customer Officer, Liebherr-Aerospace & Transportation SAS, said: “We are very pleased that in addition to the flap and spoiler actuation system, we are now also able to supply the integrated air management system. Our center of competence for air and thermal management systems in Toulouse will provide a modern air management system for the D328eco.”
