

PAL-V LIBERTY PIONEER EDITION NEARS 2024 DELIVERY MILESTONE

News / Manufacturer

PAL-V makes its vision a reality for the world of transportation, announcing a significant milestone in 2024 and delivery of the PAL-V Liberty Pioneer Edition to its first customers. Powered by e-fuels and hybrid fuel technology, first generation ‘fly-drive’ car positions PAL-V as the first mover in the advanced air mobility race to make air mobility accessible to the mass market, both on the roads and in the sky.

Robert Dingemans, CEO & Founder of PAL-V, commented: “As we are now nearing the finalization of the aviation certification of the PAL-V Liberty, we’re preparing for the production and commercialization of the product. The Liberty will mark the start of the flying car era. By using existing infrastructure and regulations we can already start using the Liberty as early as next year. In the future we will continue to develop innovative air mobility products”

PAL-V is determined to make advanced air mobility accessible and tailored to both private and B2B customers. PAL-V Liberty can be used across numerous applications including policing, security, first response, peace keeping and military applications, as well as air taxis and delivery. PAL-V already counts among its partners and customers GKN Aerospace, PRIMUS AERO and

Kuwait Airways.

Borne from the vision of making sustainable air mobility accessible to all, this critical milestone is achieved just as PAL-V is preparing for the production of its series vehicles that will complete the aviation certification next year. Even more excitingly, PAL-V will open its doors to customers in a pop-up show room in Munich from the 23rd October to the 31st October for those who wish to discover the unique fly-drive vehicle of this revolutionary air-mobility manufacturer.

30 OCTOBER 2023
