

THE GOVERNMENT OF CANADA ORDERS 4 NEW AIRBUS A330 MRTTS

News / Manufacturer

The Government of Canada awarded Airbus Defence and Space a contract for four newly-built Airbus A330 Multi Role Tanker Transport aircraft and for the conversion of five used A330-200s in a quest to strengthen Canada’s continental defence capabilities. The current contract has an order value of approximately CAD \$3 billion or 2.1€ billion. Known as the Strategic Tanker Transport Capability, this new fleet of aircraft will replace the ageing CC-150 Polaris, operated by the Royal Canadian Air Force. The existing A310 fleet is being used to perform air-to-air refuelling operations, military and personnel and cargo airlift, medical evacuations, as well as strategic transport of Government of Canada officials.

Mike Schoellhorn, Chief Executive Officer of Airbus Defence and Space, commented: “As the world’s most advanced multirole tanker aircraft, the A330 MRTT perfectly matches Canada’s needs to protect its sovereignty as well as to enhance operations both in the North American Aerospace Defence Command (NORAD) as well as in NATO. Canada achieves this enhancement

of operations not only by improving interoperability with other allied A330 MRTT customer nations but also due to the aircraft's technological primacy ahead of the global competition.”

Newly-built A330-200s will be assembled at the A330 aircraft Final Assembly Line in Toulouse, France. Scheduled to enter into conversion at A330 MRTT facilities in Getafe, Spain, in mid-2025, the first MRTT will be delivered to the RCAF in 2027. Under the agreement, the A330 MRTTs will be equipped with both the hose and drogue and a boom as refuelling options, cybersecurity solutions and countermeasures. All of them could be installed with the also included Airbus Medical Evacuation kit solution, consisting of 2 Intensive Care Units and additional stretchers.

The contract covers a full suite of training services including the most advanced training devices such as the Full Flight Simulator to prepare and maintain crew readiness as part of the modernisation of the Canadian Armed Forces' air operational training infrastructure. Following an open procurement process, in April 2021, Airbus was selected as the only qualified supplier for the CC-150 tanker replacement. With 76 orders from 15 customers and able to carry up to 300 troops, the A330 MRTT accumulates 90 percent market share outside the U.S.A. and more than 270,000 flight hours.

As a mature platform, the aircraft has been proven in combat in theatres of operations like the Middle East and the Eastern Flank in Europe, with interoperability, mission success and availability rates as highlights of its performance. Airbus has been a leading industrial player in Canada's aerospace sector for almost 40 years. The company employs over 4,000 people locally and sources approximately CAD \$2 billion from Canadian companies.
