AIRBUS

Qatar Airways announced that it will convert 10 of its 50 Airbus A321neo on order to the Airbus A321LR (long range) variant of the A320 family.

The A321LR is a type of A321neo, which has extra fuel tanks as well as a higher maximum take-off weight to give the aircraft additional range. Qatar Airways will use the A321LR to connect Doha to new growing markets where today demand is not sufficient for wide body aircraft or where current narrow bodies (A320/A321) are unable to reach. Alternatively, the new aircraft will be adopted to provide additional frequencies on existing Qatar Airways routes, giving our loyal passengers more choice and flexibility when they travel.

Qatar Airways Group Chief Executive, His Excellency Mr. Akbar Al Baker, said: “We have reassessed the requirements of our fleet and determined that the A321LR will bring the additional capability and range to our existing portfolio of aircraft types that we require to successfully support our global route expansion. Based on this analysis we have agreed

with Airbus that we will convert 10 of our 50 A321neo on order to the longer range A321LR, the first of which will be delivered in 2020.”

Airbus Chief Commercial Officer, Mr. Christian Scherer, said: “The A321LR will add a new level of flexibility to Qatar Airways’ operations. The aircraft will support the airline to better serve its existing network while equally accessing new long-haul markets with optimal performance and efficiency. Offering superior wide body comfort on single aisle, the A321LR will perfectly match Qatar Airways’ award-winning on-board experience. We look forward to seeing the A321LR flying in the colours of Qatar Airways.”

The A321LR, the latest member of the market leading A320neo family, is able to fly longer routes of up to 4,000 nm (7,400 km). The A321LR provides additional operational flexibility as it has the longest range of any single aisle airliner, making it ideally suited to transatlantic routes and enabling airlines to tap into new long-haul markets which were not previously accessible to single aisle aircraft. In general, the A321LR can carry up to 206 passengers in a typical two-class layout, or up to 244 passengers in a single-class configuration on intraregional flights, offering each passenger the possibility to carry up to three bags.

This aircraft is improved with a maximum take-off weight of 97 tonnes compared to 93.5 tonnes for a standard A321neo, with structural reinforcements at the wing and centre wing box, and the option of adding a third fuel tank in the cargo compartment, depending on the needs of the operator. This aircraft is also characterised by its passenger comfort, its significant endurance, its cabin layout adaptability, its per-seat operational costs, which are 30 per cent lower than those of the nearest competitor, and all this with excellent environmental performance.

Qatar Airways operates a modern fleet of more than 200 aircraft to a network of around 160 key business and leisure destinations across Europe, the Middle East, Africa, Asia Pacific, North America and South America.

The multiple-award-winning airline was named ‘World’s Best Business Class’ by the 2018 World Airline Awards, managed by international air transport rating organisation Skytrax. It was also named ‘Best Business Class Seat’, ‘Best Airline in the Middle East’, and ‘World’s Best First-Class Airline Lounge’.
