

F/LIST EXPANDS INTO CORPORATE HELICOPTER INTERIORS, ALLOWING INTEGRATION OF ITS MATERIALS PRODUCT PORTFOLIO ACROSS THE AEROSPACE INDUSTRY

News / Events / Festivals, Manufacturer

F/LIST, the Austrian pioneer for high-end aircraft cabin interiors, is marking a significant milestone at Aircraft Interiors Expo 2026 (Stand 6B62) with the official expansion of its production and support capabilities for corporate helicopters. F/LIST now supports customers seamlessly across corporate helicopters, business and private jets, premium commercial aircraft cabins, and private residences. Under the F/YACHTING brand, the group is also active in the yacht segment, while its sister company HILITECH expands the F/LIST capabilities with innovative lightweight and composite technologies.

Michael Müller, Managing Director, F/LIST Aviation commented: “Expanding into helicopter interiors is a natural next step for F/LIST. Many of our customers operate across multiple high-end interior environments, and with this addition, we can now accompany them across their entire ecosystem, whether in the air, on land, or at sea, delivering the same level of imagination, technological innovation, advanced material engineering, and consistent craftsmanship in every space. Customers now have a single resource for all their interior acquisition needs. Our Lightshifter responds to growing demand for immersive, adaptable cabin environments,” explains Müller. “The technology enables designers to create dramatic bulkheads, monuments or feature walls without compromising weight, space or material integrity – an approach equally suited to VIP helicopters, business jets and premium airline cabins.”

Following its commercial aerospace debut at AIX 2025, F/LIST now supports the full aviation spectrum, providing high-end materials to premium commercial airlines, business aircraft, and now, corporate helicopters. The showcase signals a clear ambition: to shape cohesive, elevated cabin experiences across every airborne setting.

F/LIST will also be making the trade show debut of Lightshifter, its latest transformative creation developed within its F/LAB innovation hub. Lightshifter metamorphoses wood veneer surfaces to reveal integrated illumination technology at the touch of a button, creating unexpected textured design features and dramatic moments throughout the cabin. When deactivated, the veneer seamlessly returns to its original appearance with no visible trace of lighting hardware.

F/LIST is also showcasing its Real Wood Veneer 65/65 technology, the industry’s first fully heat-release-compliant wood veneers. Lightweight and certified to be fully compliant for commercial aerospace, the veneers deliver the warmth, depth, and sensory richness of genuine wood. Finished with low volatile organic compound natural oil varnish, they can be customized to reflect brand identity, heritage or location.

The F/LAB Stone Inlay demonstrates how real stone can be engineered into lightweight, certified applications for high-end cabins, blending natural elegance with technical performance.

AIX is also the venue to showcase a new lighting collaboration that reimagines reading lights as premium cabin design elements. The SCHOTT® Opal Reading Light series, featuring the SCHOTT® Opal Terra platform, integrates F/LIST’s customizable natural surfaces – including wood and stone – into the light housing itself. Drawing on F/LIST’s expertise in veneers and surface finishing, the concepts can be tailored to match seat materials and colour palettes, either blending discreetly into the cabin architecture or serving as a distinctive design accent. Together, these innovations illustrate how F/LIST is redefining all premium interiors delivering immersive, sustainable and fully customizable environments that elevate the customer experience across every touchpoint.
