

BOMBARDIER GLOBAL 8000 IN FINAL ASSEMBLY AND PROGRESSING ON SCHEDULE

News / Business aviation, Manufacturer

Bombardier Global 8000 business jet program is progressing to plan, with first Global 8000 production aircraft continuing in the assembly phase in the Greater Toronto Area, Canada. Major components from Bombardier facilities were delivered per plan and the aircraft is progressing through the high-tech manufacturing process toward planned entry-into-service in 2025.

Stephen McCullough, Senior Vice President, Engineering and Product Development, Bombardier commented: "Bombardier's Global 8000 possesses outstanding short-field capabilities, with the ability to access smaller airports other aircraft in its category can't access. This helps make it the clear choice for discerning owners and operators who prioritize convenience and flexibility. This impressive aircraft will be the fastest and longest-range purpose-built business aircraft ever built and its rare combination of innovation, performance, and comfort will allow our customers to reach new heights in their business aviation experience."

David Murray, Executive Vice President, Manufacturing, IT and Bombardier Operational Excellence System stated: "The first Global 8000 production aircraft is steadily progressing through final assembly, and we are on track to meet our targets for this incredible aircraft—the industry's fastest and most impressive ultra-long-range business jet. Our engineering and production teams continue to display unmatched levels of commitment, innovation and expertise at

all stages of the manufacturing process.”

As the manufacturing process ramps up, Bombardier Flight Test Centre in Wichita recently put the Global 8000 flight test aircraft through its paces, flying testing missions to Europe, showcasing its outstanding performance attributes in real-world functional operating conditions and drawing rave reviews from test pilots.

Global 8000 business jet will also set new standards for performance and ride quality, with the fastest speed, longest range and the smoothest ride. With an industry-leading range of 8,000 nautical miles and an unequaled top speed of Mach 0.94, the Global 8000 is the ultimate time machine, unlocking more city pairs than ever before including Dubai-Houston, Singapore-Los Angeles, London-Perth and many others.

This business jet will offer unsurpassed comfort, featuring four true living spaces and a separate crew rest area. The discerning business jet will also feature the longest seated length size in its class along with the industry’s healthiest cabin, designed to maximize passenger comfort and productivity throughout their travels.
