

# JETEX INVESTS IN AZZERA TO ADVANCE SUSTAINABLE AVIATION INITIATIVES

News / Business aviation

**JETEX is the latest strategic investor in Azzera digital carbon-management platform. The new investment positions the technology platform to continue evolving functionality, grow its international footprint, and deliver new client-facing offsetting tools to its users' customers. The partnership, signed during Dubai Airshow 2025, marks a major step toward accelerating the industry's transition to cleaner, lower-emission operations.**

Under the terms of the agreement, JETEX will also work with Azzera as a sustainability partner to procure and manage sustainable aviation fuel for its international fleet beginning in early 2026. This collaboration will enable Jetex to integrate SAF into its operations for the first time, marking a significant milestone in the company's sustainability journey.

Puja Mahajan, CEO of Azzera commented: "The investment from and collaboration with JETEX demonstrates our shared vision of a future where sustainability is seamlessly embedded in every flight. Together, we're bridging the gap between climate ambition and operational reality with practical tools that make sustainability accessible, transparent, and measurable. Their investment

and involvement will enable us to continue evolving intuitive technology to help our customers, partners, and investors support the global ambitions of reducing carbon emissions.”

Adel Mardini, JETEX CEO, stated: "JETEX is one of the world's largest private aviation companies, and we take our responsibility to support the industry's ambitious climate reduction goals seriously. This is why we have chosen to partner with Azzera in advancing responsible aviation practices. Through innovation and collaboration, we're driving meaningful progress toward the industry's decarbonization goals."

Azzera also confirms that JETEX will act as a lead partner for a new tool, the Azzera SAF Productivity Operations and Delivery platform. Designed to reduce administrative bottlenecks associated with SAF, the platform addresses a key challenge in scaling SAF adoption among companies in the supply chain. For aircraft operator clients, the SAF POD will be accessible via the CELESTE platform. It will streamline SAF management by automating the conversion of digital certificates into verified emission reductions and fuel tracking, as well as the issuance of Scope 1 and Scope 3 certificates. This enhanced functionality simplifies SAF sourcing, tracking, and delivery for operators worldwide.

In addition, JETEX will integrate the Azzera FlyBeyond API tool into its charter sales ecosystem, enabling real-time carbon offsetting and SAF quoting directly within flight quotes. This technology empowers operators and their customers to make sustainable choices at the point of sale. This marks a significant advancement toward making climate action effortless within private aviation.

The investment concludes Azzera's USD \$800,000 capital raise, fueling further development of its digital sustainability ecosystem, including emissions tracking, compliance automation, and access to high-quality carbon markets through its flagship CELESTE platform.
