

NEW HEIGHTS OF CHALLENGER 350 WITH ENHANCED CABIN EXPERIENCE

News / Business aviation, Manufacturer

Challenger 350 to feature high-speed Ka-band connectivity, a refreshed CMS interface inspired by the flagship Global 7500 aircraft, and sophisticated cabin design options. Best-in-class Challenger 350 business jet delivers a smooth ride and an intercontinental range that holds true at full fuel with eight passengers. Passengers have even more reason to love the best-selling Challenger 350 aircraft thanks to a new suite of enhancements that further elevate the cabin experience aboard this award-winning jet.

“The Challenger 350 aircraft stays on top because it’s the best, and these new features set this business jet even further apart from competitors,” Peter Likoray, Senior Vice President, Worldwide Sales and Marketing, Bombardier Business Aircraft. “Customers prefer this aircraft because it offers performance without compromise and a cabin experience you can’t find anywhere else in this category.”

Bombardier recently marked the 350th delivery of the Challenger 350 business jet, a milestone reached after only six years in service. Amid all this success, this winning platform continues to evolve.

Bombardier is pleased to introduce high-speed Viasat Ka-band connectivity aboard the Challenger 350 aircraft for an enhanced internet experience over business aviation's most popular routes and regions. With service packages offering the fastest available download speeds in the super mid-size segment, passengers can enjoy improved productivity and cabin experience, whether videoconferencing or streaming. This offering will be available on new and in-service Challenger 350 aircraft, as well as on all in-service Challenger 300-series aircraft.

Bombardier is also refreshing the user interface for the cabin management system aboard the Challenger 350 aircraft, taking inspiration from the award-winning design of Bombardier's flagship Global 7500 aircraft to deliver a modern user experience via side ledge touchscreens and a new, platform-specific app. This new design also integrates moving maps, making it easier than ever to stay visually informed of flight progress.

Customers will also have an expanded cabin design selection thanks to a collection of sophisticated and contemporary interior design schemes that strike the perfect balance between aesthetics and ergonomics.

Bombardier has made several other recent enhancements to the Challenger 350 aircraft, including class-leading cabin sound-proofing technology, refined cockpit aesthetics and an available Head-up Display (HUD) and Enhanced Vision System (EVS). A performance improvement package allows the aircraft to fly up to 1,500 nautical miles farther than before out of short runways, complementing its already impressive takeoff and landing performance that includes steep-approach capability.

With a true, seats full, tanks full, 3,200-nautical-mile range, the Challenger 350 business jet can connect New York to London or Paris to Dubai nonstop* with a smooth ride at the lowest direct operating costs in its category.

These latest enhancements will start becoming available this year.
