

SIERRA INDUSTRIES INTRODUCES RE-DESIGNED ENTRY STEP

News / Business aviation

Cessna Citation modification firm **Sierra Industries** is proud to introduce version 2.0 of the Citation cabin step. Designed with significant improvements in functionality and appearance over the original factory step, the “SkyStep” improves safety and utility at a highly competitive price. Manufactured at Sierra’s PMA-approved manufacturing facility in Uvalde, TX, the SkyStep is applicable to a wide variety of classic Citation aircraft.

Improved features of the new step design include:

- Precision machined from aircraft aluminum to eliminate cracking and breaking
- Enclosed back & sides prevents slipping and improves passenger security
- 3 evenly spaced steps instead of 2 for enhanced ease of entry
- First step is closer to the ground – no need for a separate “1st step” in the nose
- Pneumatic cylinders softly deploy the door, preventing damage to door sill and toes
- Inertia reel cable with T-handle makes the step easy to retract from inside the cabin
- STC approval (pending) for Citation models 500, 501SP, 550, 551SP, S550, 560 (V, Ultra, Encore), 525 (CJ, CJ1, CJ1+), 525A (CJ2, CJ2+), 525B (CJ3, CJ3+)

Options such as integral lighting, custom paint and tread finishes are also available.

The SkyStep is now available at an introductory price of \$15,500 installed, a superb value, compared to the cost of the stock Cessna Citation replacement step. Sierra’s price includes onsite (continental US) installation by Sierra technicians. A discount of \$1,500 applies if installed at one of Sierra’s MRO facilities in Uvalde or San Antonio, Texas.
